

Qualifications

Bachelor's Degree – Manufacturing Engineering or equivalent.

- Strong knowledge and practical experience with SIMIO and SIEMENS.
- Strong knowledge and practical experience in Manufacturing Operation Patterns
- Strong knowledge and practical experience in estimating production volumes and efficiencies
- Strong knowledge and practical experience with Operational Equipment Efficiency (OEE) concepts
- Strong knowledge and practical experience with statistical analyses (descriptive, inferential)
- Strong knowledge and practical experience with 2D CAD
- Strong knowledge and practical experience in MS Excel, Macro development (VBA, C#)
- Strong knowledge and practical experience in MySQL or similar
- Strong knowledge and practical experience in Python
- Strong knowledge and practical experience with Design of Experiments (DOE)
- English language (fluent speaking/writing/reading)
- Strong presentation and communication skills

Essential Duties

- Validating and analyzing production processes with minimum supervision
- Building Static and Dynamic Simulation models with focus on throughput improvement, de-bottlenecking, buffer optimization, process improvement with minimum supervision
- Building Static and Dynamic Simulation models with focus on under-the-roof material flow, fleet estimation, congestion analysis, layout optimization with minimum supervision
- Building process charts to represent man-machine/process sequences (Cycle Time Charts - CTCs) with minimum supervision
- Troubleshooting complex situations involving multiple variables and conditions with minimum supervision
- Conducting statistical analysis of Key Performance Indicators (KPIs) with minimum supervision
- Building and analyzing what-if scenarios with focus in KPI improvement with minimum supervision
- Making technical assumptions and offering alternative approaches within a framework of customary practices with minimum supervision
- Interacting with stakeholders from the organization and customer divisions to collect, validate and analyze process data with minimum supervision
- Collecting data (on-site/off-site) to build, calibrate and validate models with minimum supervision
- Making data-driven recommendations related to cost-benefit matters regarding scenarios analyzed
- Building clear, actionable reports with minimum supervision
- Managing project data and meta-data, including procurement, logging, and dealing with unclear/incomplete information with minimum supervision
- Mitigating errors or mistakes as soon as identified with minimum supervision
- Decision-making on project time and scope, provided no engineering changes are necessary, with minimum supervision
- Observing work related timelines, scope, and quality requirements with minimum supervision
- Following operational procedures, work-standards, and divisional guidelines with minimum supervision
- Requesting timely and appropriate support from team-members and superiors when necessary
- Developing modeling libraries
- Providing support or instruction to co-workers
- Supporting hiring panels, interviews, related to the role
- Supporting other divisional activities and tasks

Travel Requirements

- Travel globally, subject to business needs: up to 30% of work hours

Awareness, Unity, Empowerment

At Magna, we believe that a diverse workforce is critical to our success. That's why we are proud to be an equal opportunity employer. We hire on the

[Jelentkezés](#)

[Mentés](#)

Qualifications

- A minimum of 2 years of experience in power market analysis, strategy, research, or a related role in the energy/commodities sector
- Strong understanding of European power markets, generation technologies, and transmission/infrastructure developments
- Bachelor's degree in Engineering, Economics, Finance, Mathematics, or a related field.
- Strong research, analytical, and synthesis skills
- Ability to structure qualitative market developments into scenario assumptions and modelling inputs.
- Excellent presentation and communication skills
- Coding skills in Python and SQL are an advantage
- Ability to explain complex developments clearly and translate research into actionable analytical views

Additional Information

- Competitive remuneration
- Working in a dynamic international team
- High degree of responsibility and independence
- Friendly and modern working environment

What You Need To Be Successful

- Strong SQL and data transformation skills
- Experience with data pipelines and ETL/ELT frameworks
- Understanding of data modeling and layered architectures (e.g., Medallion)
- Experience with large-scale data processing (e.g., Spark, Databricks) is a plus
- Familiarity with cloud platforms (AWS, Azure) is a plus
- Experience with Git and modern development practices
- Strong problem-solving and performance optimization skills
- Understanding of APIs and data integration patterns
- Working knowledge of Python for data processing, automation, and pipeline development

Bonus Points if You Have

- Experience with Databricks, Spark, or distributed data processing frameworks
- Experience working with cloud platforms such as Azure or AWS
- Experience building data pipelines using Python
- Familiarity with Delta Lake, Medallion Architecture, or modern Lakehouse concepts
- Experience working with manufacturing, supply chain, procurement, or operational data
- Exposure to BI and analytics tools such as Power BI, Qlik, Tableau, or similar platforms
- Familiarity with REST APIs, JSON, and integrating external data sources
- Experience using AI-assisted development tools such as GitHub Copilot, ChatGPT, or similar coding assistants
- Understanding of data quality, validation, and testing concepts
- Experience with Agile development methodologies and collaborative software development practices
- Bachelor's degree in Computer Science, Information Systems, Engineering, Data Analytics, or a related field

Job Requirements

- Strong experience designing and delivering cloud-based data engineering solutions.
- Hands-on experience with Microsoft Fabric and Azure data technologies.
- Strong SQL skills and practical experience with Python and/or PySpark.
- Knowledge of lakehouse, data warehouse, and modern data architecture concepts.
- Experience building data integration, ETL, or ELT solutions across multiple data sources.
- Strong communication skills and the ability to work effectively with customers and internal teams.

What we offer:

- Global Company Culture: We defined our 6 core values through our company culture (<https://www.softwareone.com/en/our-story/our-values>)
- The opportunity to work on complex enterprise Data & AI transformation projects.
- Access to Microsoft, Databricks, and cloud training and certification programs.
- Collaboration with experienced architects, engineers, security specialists, and AI experts.

Jelentkezés 

Mentés

How You'll Make An Impact

- As a Senior Data Engineer, you will contribute to the technical management and development of the team's cloud data platform and data models which are currently built on Azure Databricks.
- Develop and maintain the Data-Driven Project Modelling (DPM) engine, following DevOps best practices to support strategic decision-making, risk assessments, business cases, and financial reporting.
- Collaborate and bring positive energy to a multinational team of technical and business experts to translate business logic into data solution development.
- Provide support and documentation for end-users to move towards a transparent self-service usage of DPM's developed applications and solutions.
- Be proactive, take accountability and independently suggest and implement innovative solutions to create value for the team's key stakeholders.

What You Bring

- Extensive experience (minimum 3 – 5 years) as data engineer including hands-on knowledge in at least one high-level programming language (e.g. Python, or similar), SQL, as well as modern large-scale data processing tools such as Apache Spark, or similar. In a previous role, you should have gained deep understanding of ELT/ETL processes, data governance, modelling concepts like Star and Snowflake, modern lakehouse architectures, and interfaces to data visualization tools like Power BI.
- Proven experience with at least one of the major cloud platforms (Azure, AWS, GCP), and knowledge of common DevOps best practices, such as agile frameworks, version control, CI/CD, unit testing, etc.
- Collaborative mindset in an international environment, taking ownership of developed and inherited data solutions, as well as a high level of personal integrity, self-motivation, and independence.
- Strong critical thinking and problem-solving skills with a customer centric approach, delivering high-quality results under pressure. Furthermore, a willingness to collaborate with non-technical finance stakeholders to build solutions that are both technically scalable and give immediate value to stakeholders.
- Experience with state managed infrastructure-as-code tools, knowledge about financial processes, specifically warranty management within finance, or rolling out agentic AI solutions in production is a plus.

About The Team

[Jelentkezés](#) ↗

[Mentés](#)

Experience

- At least 3-5+ years of overall experience in pricing or strategy function, management consulting, or an analytically-driven role.
- Experience in travel, e-commerce, or online marketing is a plus.

Hard Skills

- Proficient in MS Excel/PowerPoint.
- Additional technical skills are a plus: VBA, PowerBI, SQL.

Az állás részletei

You ...

- are constantly looking to learn and have an interest in technical topics
- are quick to understand and have an analytical mindset
- enjoy solving complex customer problems as part of a team
- have a very good first or higher degree in a technical subject (computer science, physics, mathematics, etc.)
- possess IT knowledge and coding experience
- are interested in artificial intelligence and machine learning
- are proficient in English, additional German or Hungarian skills are an advantage

Your role:

- Analysis of customer requirements, development and optimization of large and complex software systems with high personal responsibility
- Implementation of automation processes and cloud infrastructure
- Consulting on and implementation of automated test environments
- Development and conceptual integration of AI components such as Machine Learning models or LLMs
- Introduction of agile processes
- Optionally, there are numerous opportunities to get involved within TNG

Our offer:

- A demanding, academic environment
- An open minded and team oriented culture

[Jelentkezés](#) 

[Mentés](#)

**Data Engineer**

Allianz Technology • Budapest, Budapest, Hung...

**What You Bring**

- A background as a software developer with in-depth knowledge of the data landscape at Allianz Technology and an interest in data analytics and data warehouse solutions, as well as their implementation.
- You are proficient in ABS and motivated for a new challenge.
- You bring a strong desire to shape and take initiative, as well as analytical skills combined with problem-solving competence.
- Experience with the following tools will significantly ease your start in your new role: Python, SQL, Spark, GitHub, and Azure Synapse Analytics.
- It would also be advantageous to have initial knowledge of data platform architectures (Data Warehouse, Data Lake, Lake Warehouse, Medallion Architecture) and knowledge of various data modeling techniques (3NF, Star Schema, Data Vault, etc.).
- You are ready to continuously learn new technologies and methods to stay at the forefront of technology and develop the best solutions for Allianz.
- An agile mindset with the willingness to use agile tools, methods, and knowledge rounds out your profile.
- Basic knowledge of AI technologies, principles, and their practical use.

What We Offer

- We offer a hybrid work model which recognizes the value of striking a balance between in-person collaboration and remote working incl. up to 25 days per year working from abroad.
- We believe in rewarding performance and our compensation and benefits package includes a company bonus scheme, pension, employee shares program and multiple employee discounts (details vary by location).
- From career development and digital learning

[Jelentkezés](#)[Mentés](#)

What will you do?

- Analyze complex datasets and derive actionable quality improvement measures.
- Support internal and external audits across various operational locations.
- Prepare and analyze quality metrics to support management decision-making and strategic planning.
- Conduct process observations to identify quality improvement and optimization opportunities.
- Develop, implement, and maintain system-supported and automated testing solutions.
- Ensure the quality and continuous improvement of existing and future virtual assistants.
- Facilitate workshops, deliver presentations, and drive stakeholder engagement.
- Collaborate on cross-functional projects and digitalization initiatives.

What are we looking for?

- Experience in quality management, process improvement, analytics, or a similar role.
- Excellent communication skills in German, you will work with German colleagues.
- Communicative English language skills
- Strong analytical skills with experience in data analysis especially in Excel.
- Experience with Celonis.
- Strong interest in digitalization, automation, and process optimization.
- Proactive mindset, problem-solving ability, and strong stakeholder management skills.

What do we offer?

- Annual cafeteria allowance of HUF 500,000.
- Hybrid working model.
- Opportunity to contribute to large-scale digitalization and transformation projects.
- Professional development and certified training opportunities.

[Jelentkezés](#) 

[Mentés](#)

What You Bring

- 5+ years building data-intensive applications or backend systems
- High proficiency in Python and strong software engineering fundamentals: testing strategy, CI/CD, debugging distributed systems in production
- Expertise in distributed data processing patterns and hands-on experience with big data technologies (Spark, Flink, or similar)
- Strong SQL capabilities for complex queries
- Working knowledge of AWS (S3, EC2, Lambda, EMR, or equivalents) and experience running your own code in production
- Ability to operate independently, embrace new technologies, and make sound technical decisions
- Solid communication skills in English

Bonus Points

- Production experience with Kafka and stateful stream processing in Flink
- Open table formats (Apache Iceberg, Delta Lake) and lakehouse architectures
- ML serving experience: feature pipelines, inference APIs, A/B testing

What We Offer

- Flexible working hours with home office opportunity
- Medcover health insurance
- Company lunch every day in the office
- In-house gym in the office
- Exciting programs and team-building events
- Recreation room with darts, ping pong, foosball, XBox, and other games
- Modern and fancy office in Buda close to Széll Kálmán tér

Az álláshirdetésben szereplő juttatások

[Jelentkezés](#)[Mentés](#)

About You

- Solid experience in accounting or financial planning & analysis, and finance master data management
- Strong hands-on experience with SAP systems and/ or TM1
- Project leadership experience
- Proven analytical and problem-solving skills, with the ability to make independent decisions
- Strong stakeholder management and communication skills, including the ability to influence senior leaders
- Bachelor's or Master's degree in Finance, Accounting, Data Analytics, or a related field
- Fluent in English, spoken and written

Preferred

- Experience with Power BI, Power Query, Snowflake
- Understanding of fundamental data modeling / data quality concepts, basic SQL coding

Mentés

Requirements

- 2+ years of experience in Data Software Engineering
- Coding experience with one of the following programming languages: Python/Java/Scala/Kotlin
- Understanding of cloud environments with leading providers (AWS, Azure, GCP), including Storage, Compute, Networking, Identity and Security, NoSQL, RDBMS and Cubes, Big Data Processing, Queues and Stream Processing, Serverless, Data Analysis and Visualization, Machine Learning as a Service (e.g., SageMaker, TensorFlow)
- Familiarity with cloud-native technologies such as Databricks, Azure Data Factory, AWS Glue, AWS EMR, Athena, GCP Dataproc, or GCP Dataflow
- Familiarity with Big Data technologies like Spark Core, Spark SQL, Spark ML, Kafka, Kafka Connect, Airflow, NiFi, or StreamSets
- Experience with Linux OS, configuring services, and scripting with basic shell commands, as well as understanding network fundamentals
- Competency in SQL and relational algebra
- Background in developing software solutions using Big Data technologies, including administration, monitoring, debugging, configuration management, and performance tuning
- Knowledge of data ingestion pipelines, Data Warehousing, and Data Lakes concepts
- Expertise in data modeling and development experience using modern Big Data components
- Knowledge of designing scalable, available, and fault-tolerant systems
- Understanding of CI/CD principles and best practices
- Analytical problem-solving abilities paired with excellent interpersonal and communication skills
- Data-driven mindset that reflects motivation, independence, and efficiency, thriving under pressure while prioritizing effectively
- Flexibility to adapt to fast-paced (startup-like) agile environments
- Knowledge of container and resource management systems such as Docker and Kubernetes
- Proficiency in infrastructure troubleshooting, performance tuning, and resolving bottlenecks
- Broad exposure to diverse business domains
- English language proficiency (B2 level or higher)

Nice to have

- Experience with the Snowflake platform

We offer

- Dynamic, entrepreneurial corporate environment
- Diverse multicultural, multi-functional, and multilingual work environment
- Opportunities for personal and career growth in a

Dein Profil

Wir suchen einen erfahrenen **Expert Developer – Data Analytics & Data Engineering** mit umfassender Expertise in moderner Datenplattform-Architektur, cloudbasiertem Data Engineering und nachgewiesener Erfahrung in der Migration traditioneller Data-Warehouse-Lösungen zu modernen Lakehouse-Architekturen auf Azure.

Muss-Kriterien

- Abschluss in (Wirtschafts-)Informatik, Betriebswirtschaft oder gleichwertige praktische Erfahrung
- Mindestens 5 Jahre Erfahrung in Data-Engineering-Architektur
- Mindestens 5 Jahre praktische Erfahrung mit Databricks & Delta Lake auf Azure-Services
- Nachgewiesene Expertise in der Migration von traditionellen Data-Warehouse-Lösungen zu modernen Datenplattformen wie Lakehouse & Delta Lake
- Ausgeprägte Erfahrung in modernen Datenplattform- und Data-Warehousing-Architekturen
- Fundierte Kenntnisse in Data-Lake-Speicherorganisation und -Architektur
- Solides Verständnis relationaler und multidimensionaler Datenbanksysteme
- Kenntnisse in Data-Warehouse-Modellierungsmethoden (Kimball, Inmon, Data Vault)
- Erfahrung mit Datenpipelines unter Verwendung von Spark Structured Streaming und Delta Lake
- Ausgeprägte Programmierkenntnisse in SQL
- Ausgeprägte Programmierkenntnisse in Python
- Ausgeprägte Programmierkenntnisse in Spark
- Erfahrung mit Azure Data Factory
- Erfahrung mit Azure Data Lake Storage
- Erfahrung mit Azure Event Hub
- Kenntnisse im Datenschutz und in der Sicherheit beim Umgang mit geschäftskritischen und personenbezogenen Daten

Von Vorteil

- Vertrautheit mit Reporting, Analytics und Dashboarding
- Praktische Erfahrung mit agilen Entwicklungsmethoden (SCRUM, KANBAN, etc.)
- Kenntnisse in BI-Lösungen mit Azure Databricks
- Kenntnisse in Azure Synapse
- Kenntnisse in Azure Logic Apps
- Kenntnisse in Power BI
- Erfahrung mit Power Platform (Power Automate, Power Apps)
- DP-900: Microsoft Azure Data Fundamentals Zertifizierung
- DP-100: Designing and Implementing a Data Science Solution in Azure Zertifizierung
- DP-203: Data Engineering on Microsoft Azure

Qualifications

Your Experience & Qualifications

- Degree in (Business) Informatics, Business Administration, or equivalent practical experience.
- At least 5 years of experience in data engineering architecture, with:
- Minimum 5 years of hands-on experience with Databricks & Delta Lake on Azure services.
- Proven expertise in migrating from traditional data warehouse solutions to modern data platforms like Lakehouse & Delta Lake.
- Expected Skills & Knowledge

Technical Expertise:

- Strong experience in modern data platform and data warehousing architectures.
- Deep knowledge of data lake storage organization and architecture.
- Solid understanding of relational and multidimensional database systems.
- Proficiency in data warehouse modeling methods (Kimball, Inmon, Data Vault).
- Experience with data pipelines using Spark Structured Streaming and Delta Lake.
- Strong programming skills in SQL, Python, and Spark.
- Preferred Additional Experience:
- Familiarity with reporting, analytics, and dashboarding.
- Hands-on experience with Agile development methodologies (SCRUM, KANBAN, etc.).
- Knowledge of BI solutions using: Azure Databricks / Azure Data Factory / Azure Storage / Azure Synapse / Azure Logic Apps / Power BI

Additional Information

- Experience with Power Platform (Power Automate, Power Apps) is a plus.
- Certifications (Preferred but Not Mandatory)
- DP-900: Microsoft Azure Data Fundamentals
- DP-100: Designing and Implementing a Data Science Solution in Azure
- DP-203: Data Engineering on Microsoft Azure
- DP-300: Managing Relational Databases on Microsoft Azure
- AI-900: Microsoft Azure AI Fundamentals
- AZ-900: Microsoft Azure Fundamentals
- DP-420: Designing and Implementing Cloud-Native Applications with Microsoft Azure Cosmos DB
- Please be informed that our remote working possibility is only available within Hungary due to European taxation regulation.

What You'll Bring

- Minimum 6 years of relevant experience
- Strong experience developing executive-facing Power BI dashboards and data visualisation solutions.
- Proven ability to create impactful management reporting and performance insights for senior stakeholders.
- Experience using AI-enabled capabilities or advanced technologies to improve reporting and insight generation.
- Strong analytical and problem-solving skills, with the ability to simplify complex information for different audiences.
- Excellent communication skills and the ability to present complex information in a clear and engaging way.
- A collaborative mindset and experience working across Finance, Risk, Technology, and business teams.
- Confidence working with senior stakeholders and influencing decision-making through data-driven insights.
- A passion for continuous improvement and learning.
- Adaptability and the ability to thrive in a fast-paced, evolving environment.
- Experience with managing and developing a team

Why Join Morgan Stanley?

- Become a recognised expert in executive reporting, data visualisation, and business intelligence.
- Work directly with senior leaders and contribute to strategic decision-making.
- Lead innovative reporting initiatives using Power

[Jelentkezés](#) 

[Mentés](#)

What You Bring

- 3+ years building automation workflows, integrations, or agentic systems — using AI orchestration platforms, workflow automation tools, or equivalent technologies
- Strong understanding of API integrations — REST, webhooks, authentication patterns, and error handling at scale
- Experience working with LLM APIs — prompt engineering, structured outputs, tool use, and agent chaining
- Comfort working from a spec — you can take a workflow design and build it accurately without the architect in the room
- Growth or marketing context — you understand what you're building toward, not just how to build it
- Speed and quality in balance — you ship fast and you care what you ship

Nice to haves

- Experience with paid media platforms, marketing automation, CRM, or lifecycle messaging systems
- Familiarity with data warehouse query patterns and event tracking infrastructure
- Background in a high-growth fintech, consumer tech, or multi-product technology environment
- Experience designing multi-agent architectures or complex agent-to-agent workflows

Unless a specific application deadline is stated in the job posting, applications are accepted on an ongoing basis.

Please note, applicants are permitted to redact or remove information on their resume that identifies age, date of birth, or dates of attendance at or graduation from an educational institution.

We consider qualified applicants with criminal histories for employment on our team, assessing candidates in a manner consistent with the requirements of the San Francisco Fair Chance Ordinance.

Forward Deployed Engineer (m/f/d)

Allianz Technology • Budapest, Budapest, Hung...

What You Bring

- Hands-on software engineer with a track record of shipping production code across a big stack-backend, frontend, data, and ops.
- Comfortable operating in unfamiliar codebases, domains, and partner environments; identifying issues and delivering value.
- Practical experience with cloud-native stacks and DevOps (CI/CD, containers, Kubernetes), testing/observability, and secure coding in regulated settings.
- Working knowledge of the modern data/AI stack (e.g., Python, APIs, vector databases) and integrating LLM/agent frameworks; prompt-first mindset.
- Strong collaboration and communication skills; pairs effectively with an AI Engagement Manager and executes with thorough documentation.
- Bachelor's degree in Computer Science/Engineering or equivalent professional experience
- Fluency in English

What We Offer

- We offer a hybrid work model which recognizes the value of striking a balance between in-person

[Jelentkezés](#)[Mentés](#)

Junior Data Engineer

NN • Budapest, Hungary (Hybrid)

Who you are

- You have a basic foundation in Azure Data Engineering and, most importantly, the curiosity and motivation to keep learning, developing your skills and improving every day.
- You have a basic to good understanding of SQL and Python, and you are motivated to further develop these skills in practice.
- You are a real team player with a hands-on attitude and flexibility to deal with changing priorities in a dynamic environment.
- You want to fully understand the Cloud and Data concepts, to create an innovative solution that is future-proof.
- You are interested in cloud and data concepts and want to learn how to build secure, reliable and future-proof data solutions. Strong English communication skills with ability to grasp the big picture
- You have acquired relevant azure data certifications, DP-203 is desirable. Optional.
- Passion for automating recurring tasks such as testing and security in CI/CD pipelines

Strong plus:

- Experience and knowledge of Solvency II and/or IFRS
- Experience in Finance Banking or Risk management Insurance.
- Experience in working with complex systems applications chain (building models to support the entire application chain)

Your colleagues

You will be part of the Data Platform team which is part of the ID&T department, of the Group Finance.

Continue developing

It is important to us that you continue to develop yourself. We give you the space and the confidence to grow in your career as well as a person. We help you with:

- Plenty of training and learning opportunities in our Learning & Development Centre

[Jelentkezés](#)[Mentés](#)

Skills

- Executive stakeholder management and workshop facilitation — can hold a room of C-level people and leave with something written down
- Process analysis and mapping: current-state documentation, process-as-is vs. process-as-written, workflow redesign
- Requirements engineering for AI systems: user stories, acceptance criteria, eval design rather than vague wish-lists
- ROI / business-case modelling and prioritisation under constraints
- OKR / goal-management fluency — enough to coach, not just record
- Hands-on with LLM tooling: prompting, no-code/low-code prototyping, agent builders, evaluating output quality critically
- Comfortable reading process-mining / usage data and reasoning about it quantitatively (SQL or spreadsheet-level analysis is enough)
- Exceptional written English — most of your output is prose someone else acts on

Knowledge

- Financial services / private equity operating context: investment policy, portfolio reporting, board and committee process, family-office structures — a strong plus
- AI governance basics in regulated environments: what to document, what needs a human, what needs an audit trail
- GDPR fundamentals as they apply to employee-generated data (mail, chat, meeting recordings) — including the politics of capture-by-default
- Awareness of ontologies / knowledge graphs — you don't build them, but you must be able to argue about definitions with the architect

Traits

- Strategic thinker who can also do the unglamorous documentation work
- Comfortable telling an executive their stated process isn't the one the data shows
- Technically curious and genuinely hands-on with AI tools, without pretending to be an engineer
- Bias to writing things down; allergic to unresolved ambiguity

Experience

- 4+ years in business analysis, management consulting, process improvement or AI/product analysis
- Demonstrated experience eliciting requirements from senior stakeholders and shipping against them
- Hands-on LLM / generative-AI implementation

Ami Szükséges Az Eredményes Munkádhoz

- felsőfokú végzettség informatikai/matematikai/gazdasági vagy egyéb releváns szakirányon
- 3-5 év releváns területen szerzett szakmai tapasztalat preferáltan multinacionális környezetben
- adatkörök ismerete üzleti felhasználás, adattárház reprezentáció és forrásrendszerekbeni leképződés szerint
- analitikus szemlélet
- középfokú angol nyelvismeret
- csapatjátékos attitűd, jó kommunikációs készség

Amivel Várunk Téged

- Változatos feladatokon keresztül, fejlődési- és karrierlehetőséget biztosítunk számodra.
- Szakmai és soft skill képzések széles palettáját kínáljuk Neked munkavégzésedhez kapcsolódóan.
- Juttatási rendszerünket folyamatosan bővítjük, jelenleg telefonflotta csomag, Cafetéria (SZÉP kártya), egészségbiztosítás, gyümölcsnap, nagyon finom kávé, és sok más kedvezményes lehetőség, amivel várunk Téged

Jelentkezés 

Mentés

About The Role

We are looking for a **Data Engineer** who can own and deliver across data engineering tasks, integrations, and marketing systems. This is not a junior learning role: we need someone who can quickly understand production systems, solve problems independently, and ship reliable work.

The core technical base is **Python, SQL, and Bash**. Experience with **Google Tag Manager, pixel/conversion setup, and JavaScript** is required. Airbyte and Airflow are nice to have, but not mandatory.

Requirements

- Strong Python, SQL, and Bash skills
- Experience with Google Tag Manager, pixels, conversion setup, and JavaScript
- Experience with Google Ads, Meta Ads, Bing Ads
- Engineering mindset and ability to work with production data systems
- Basic understanding of BigQuery, ClickHouse, dbt, and documentation practices
- Airbyte or similar ingestion tool experience is nice to have
- Basic Airflow familiarity is nice to have
- Strong problem-solving skills and attention to detail

Requirements

Minimum Qualifications:

- 3 years of experience as a software engineer, working on backend and ETL for webapplications
- Experience collecting, cleaning, and analyzing large data sets
- Proficiency in Python
- Proficiency in SQL
- Strong oral and written communication skills
- Project management skills and ability to handle multiple priorities at different timescales
- Proven problem-solving skills using deductive reasoning, understanding hierarchical relationships, and identifying gaps in logic
- Self-starter and ability to work independently
- Located in Eastern Europe

Preferred Qualifications:

- Proficiency in at least one of the following tools: Power Bi, Tableau, Google DataStudio
- Excellent analytical and customer-facing skills with attention-to-detail
- Experience working with AWS, GCP or Azure

Recruitment Process:

Our application process consists of a few stages, each of which is asynchronous. We respect your time, so we designed the process with efficiency in mind, including only the essential steps. The goal is to ensure it's a good fit for both you & Spate. Here's what the process entails:

- Application

Mentés

Your Profile

- 2–5 years of hands-on experience using Tableau Creator in a production environment (LOD, Parameters, Set, Filter, Tooltip, etc).
- Solid and practical SQL skills, including complex joins, aggregations, and working with cloud-based datasets.
- Strong communication skills, with the ability to explain insights to both technical and non-technical audiences.

Nice-to-Have Skills

- Practical understanding of Databricks or other cloud-based data platforms.
- Familiarity with how data pipelines, transformations, and analytical data models are built and maintained.
- Exposure to Python for analytics or automation (pyspark, dbt, dagster, etc).

Riasztás beállítása hasonló állásokhoz

Tableau Frontend BI Professional,

Ki ☐

Jelentkezés 

Mentés

What You'll Need

- Six or more years of experience building and operating production backend, data, or distributed systems
- Strong production Python and SQL, including experience building APIs, designing schemas, optimizing queries, and working with large or complex datasets
- Deep experience with relational data systems and strong judgment about when graph or other specialized databases are the right choice
- Experience building reliable ingestion and update pipelines, including incremental processing, data-quality checks, schema changes, and safe backfills
- Experience designing production services with clear API contracts, versioning, error handling, and performance considerations
- Hands-on experience deploying and operating services in AWS using containers, CI/CD, monitoring, and production debugging tools
- Strong engineering practices around testing, code review, observability, documentation, and maintaining systems that other teams depend on

It Would Be a Bonus If You Had

- Deep experience operating a graph database in production, including traversal performance and query tuning at scale
- Experience with versioned, bitemporal, or event-sourced data systems
- Experience with vector search or semantic retrieval components (pgvector, OpenSearch, Pinecone, or similar)
- Experience with multi-tenant data design and per-tenant isolation

Onsite Collaboration Requirement: This role requires working onsite on Tuesday and Wednesday, with Thursday strongly encouraged as part of our company's in-person collaboration model.

Why Join Us

Join us and help shape the future of education by turning cutting-edge AI into reliable product capabilities.

[Jelentkezés](#) 

[Mentés](#)

Qualifications

Requirements:

- Minimum six years' experience in data engineering, with substantial exposure to Azure cloud services
- Demonstrable hands-on experience delivering production workloads on Microsoft Fabric, including Lakehouse, Warehouse, OneLake and Fabric Data Factory
- Proven experience migrating Azure Synapse and Azure Data Factory workloads onto Microsoft Fabric within a live environment
- Strong programming capability in Python and SQL, applied to production systems
- Practical experience with Apache Spark and PySpark at scale
- Working knowledge of Azure Synapse Analytics, including dedicated and serverless SQL pools and Spark pools
- Experience of dimensional modelling and lakehouse architecture
- Experience applying source control and CI/CD practices to data engineering deliverables
- Experience mentoring or line-managing engineers
- Ability to communicate technical concepts clearly to non-technical stakeholders across operational and commercial functions
- Professional working proficiency in English

Desirable

- Experience with Model Context Protocol, agent tooling, retrieval-augmented generation pipelines or vector stores
- Experience with dbt or comparable transformation-as-code tooling
- Experience with Terraform or Bicep
- Experience with Microsoft Purview or comparable data governance tooling
- Experience of manufacturing, engineering or industrial data sources, including IoT, MES and ERP systems
- Relevant Microsoft certification (DP-203, DP-600 or Fabric equivalents)
- Scala
- Degree in computer science, information technology, engineering or a related discipline, or equivalent professional experience

Required Qualifications

- 4+ years of experience in ML Ops, Platform Engineering, SRE, or similar infrastructure roles focused on ML systems
- Hands-on experience with model serving frameworks such as vLLM, TGI, Triton, or equivalent
- Strong background in container orchestration and operating GPU-based workloads in production
- Experience with MLOps tooling including model registries, experiment tracking, and automated deployment pipelines
- Proficiency in Python and infrastructure-as-code tools (e.g., Terraform, Helm, or similar)
- Strong understanding of distributed systems, performance tuning, and production reliability engineering
- Ability to effectively use AI coding assistants to accelerate development and debugging workflows
- Ownership mindset with the ability to operate independently in a remote-first environment

Preferred Qualifications

- Experience with ML platforms such as Kubeflow, MLflow, or KubeAI
- Knowledge of GPU scheduling, CUDA/ROCm optimization, or multi-tenant inference systems
- Experience with cost optimization across different GPU types and inference workloads
- Background in early-stage startups or greenfield infrastructure projects
- Proven experience building production systems from scratch rather than maintaining legacy platforms
