

You will need

- Education in mathematics, computer science, data science, logistics or similar
- Min. 1 year of relevant working experience
- Intermediate level of English language knowledge
- Mathematical and logical thinking
- Good presentation and communication skills to interpret conclusions
- Willing to learn about new approaches in the data science field
- Attention to the details
- Must have experience with:
 - SQL
 - MS Access
 - MS Excel
 - MS Powerpoint
- Good to have:
 - Knowledge about any of the following languages Python, Matlab, R or Scala
 - Understanding version control (Git, GitHub)
 - Understanding Hadoop ecosystem (HDFS, Hive, Spark)
 - Understanding the basic principles of Machine Learning (train/test, data validation, basic models)

What We Are Looking For

- 3+ years applied ML experience across at least two of: text/content classification, computer vision, similarity search / embedding models, security or threat detection
- Evidence of end-to-end delivery: models you personally took from data to production, running in systems used by other teams or customers
- Experience building data pipelines for model training: data collection, labeling and ground truth management, feature extraction, dataset versioning
- Strong Python; PyTorch or TensorFlow; experience with model evaluation frameworks
- Solid grounding in statistics and experiment design, including evaluation under distribution shift
- Comfort working across the integration boundary (for example, ONNX consumption from JVM services) rather than stopping at the model artifact
- Fluency with AI coding and agent tooling, and a track record of automating your own workflow with it
- Excellent communication and collaboration abilities; fluent in English

What You'll Bring

- Strong academic background in a quantitative or technical discipline such as Computer Science, Engineering, Mathematics, Physics, Statistics, or Quantitative Finance
- Experience in a quant developer, strategist, modelling, analytics, or software engineering role
- Strong programming skills, ideally in Scala, C++, Python, or similar languages
- Engineering mindset with experience building clean, scalable, and production-quality solutions
- Strong understanding of quantitative modelling, data structures, algorithms, or statistical methods
- Interest in financial markets, forecasting, planning, or balance sheet modelling
- Ability to break down complex problems and develop structured, practical solutions
- Strong communication skills with the ability to explain technical concepts to both quantitative and business stakeholders

Nice to have

- Experience with forecasting models, financial planning, stress testing, or risk models
- Exposure to ML/AI techniques, model deployment, or modern data platforms
- Familiarity with Finance, Treasury, Capital, or FP&A processes
- Experience working in a front-office strat, analytics, or model development environment

Why join us?

- Build high-impact forecasting models used in strategic decision-making at global scale
- Work on a major transformation initiative combining Finance, Engineering, ML, and AI
- Collaborate with talented teams across Corporate FP&A, Strats, Technology, Risk, and senior management
- Apply your coding and quantitative skills to real-world financial challenges

[Jelentkezés](#)[Mentés](#)

data science

Your Profile

- Bachelor's degree in Engineering, Data Science, Statistics, Mathematics, or similar
- 2+ years of experience in data analytics, reliability engineering, or asset performance analytics
- Strong proficiency in Python for data analysis (pandas, numpy, plotly, dash)
- SQL skills for querying and joining complex datasets
- Experience working with time-series and event-based data
- Ability to structure and document analytical methods for reuse
- Good understanding of statistics
- Strong analytical and problem-solving mindset
- Ability to translate complex data into clear engineering insights

**Supply chain Analyst**
Jobgether • Hungary (Remote)**Requirements**

- Bachelor's or Master's degree in Supply Chain Management, Data Science, Engineering, or a related discipline.
- 1–3 years of relevant professional experience, academic project experience, or comparable hands-on exposure to supply chain analytics or data analysis.
- Strong technical capabilities in Python, SQL, and data visualization platforms such as Tableau or Power BI.
- Experience or familiarity with AI/ML frameworks including TensorFlow or PyTorch.
- Knowledge of cloud platforms such as AWS, Azure, or GCP.
- Solid understanding of supply chain fundamentals, including procurement, logistics, inventory management, and demand planning.
- Strong analytical and problem-solving abilities, with the capacity to work with large datasets and translate findings into actionable business insights.
- Excellent written and verbal communication skills, including the ability to present technical analysis clearly to non-technical stakeholders.
- Ability to collaborate effectively across multiple functions and work independently when required.
- Comfortable working in a fast-paced, evolving environment with a strong focus on results, learning, and continuous improvement.
- Curious and detail-oriented mindset with a genuine interest in applying technology and analytics to operational challenges.

Benefits

- Salary: \$24,000.
- Employment: Full-time position.
- Work Flexibility: Fully remote work arrangement.
- Professional Growth: Opportunity for an early-career professional to strengthen expertise across supply chain analytics, data science, AI/ML, and cloud technologies.
- Cross-Functional Exposure: Work closely with Supply Chain, Finance, Procurement, R&D,

What We're Looking For

We are seeking a seasoned expert with a passion for building intelligent systems and solving complex problems.

- A Master's or PhD in Computer Science, Machine Learning, Data Science, or a related quantitative field.
- 3+ years of hands-on professional experience in building and deploying machine learning models in a production environment, with a significant focus on Information Retrieval, Search, or Recommender Systems.
- Strong programming skills in Python and familiarity with SQL or other query languages.
- Deep knowledge of ML frameworks like PyTorch or TensorFlow, and libraries like Scikit-learn and Hugging Face.
- Hands-on experience with vector databases.
- Analytical Mindset: Exceptional quantitative and problem-solving skills, with a proven ability to apply rigorous statistical and mathematical reasoning to complex, real-world challenges.
- Excellent verbal and written communication skills in English. You are a clear and precise communicator who excels in a collaborative, agile team environment.

Bonus Points:

- Experience in the financial domain.
- Experience with MLOps tools and cloud platforms.

What's in it for You?

- **Growth Opportunity:** Join a rapidly growing company with 180+ team members with offices in New York, Madrid, and Marbella, building AI that truly matters for business and finance.
- **Competitive Salary:** In RavenPack, we believe that your time and experience needs to be fairly rewarded.
- **Continuous learning:** We provide the support needed to grow within the team.
- **Innovation:** Innovation is the key to our success, so we encourage you to speak up and tell us about your vision.
- **Diversity is in our DNA!** You will work in an international environment (over 29 nationalities and 24 languages spoken!)

We are an equal opportunity employer and value diversity at our company. We do not discriminate on the basis of race, religion, colour, national origin, gender, sexual orientation, age, marital status,

**AI Solutions Analyst - Banking Market In...**

McKinsey & Company • Budapest, Budapest, Hu...

**Your Qualifications and Skills**

- Bachelor's or higher degree in economics/finance, engineering, technology or social sciences; master's degree preferred
- First work experience in banking, finance, private equity, venture capital or other closely related area
- Strong analytical capability and ability to synthesize complex relationships
- Agentic AI workflow building: hands-on fluency with LLMs, prompt workflows, agent frameworks, RAG / knowledge layers, MCPs or tool use, and human-in-the-loop review patterns
- Analytics automation: practical experience with Python, Excel, APIs, and CSV / XLSX workflows to inspect data, automate recurring tasks, and validate outputs
- Data quality engineering: ability to design baseline checks, anomaly detection, output validation, reproducibility checks, and audit trails for research and client-ready outputs
- Basic understanding and interested for financial services, digital solutions, innovations and related macro trends
- Intellectual curiosity along with strong analytical capability and problem-solving skills
- Excellent written and verbal communication skills in English

Tobábbi kapcsolatos betekintés**Jelentkezés** **Mentés**

**Ezeket a feladatokat tervezzük Neked:**

- Gépi tanulási modellek és algoritmusok fejlesztése, finomhangolása és bevezetése éles környezetbe
- Adatok előkészítése és feldolgozása, biztosítva az adatok minőségét és integritását
- Modellek teljesítményének értékelése, optimalizálása és monitorozása éles környezetben
- Mesterséges intelligencia és gépi tanulási rendszerek skálázása és integrálása meglévő infrastruktúrába
- Automatizált machine learning pipeline-ok és MLOps folyamatok kialakítása és karbantartása
- OpenSource könyvtárak megfelelő ismerete
- API-k és egyéb interfészek fejlesztése a gépi tanulási modellekhez
- Részvétel a modellek verziókezelésében, deployálásában és CI/CD folyamatok fejlesztésében
- Szoros együttműködés data scientist-ekkel, szoftverfejlesztőkkel és üzleti elemzőkkel
- A legújabb ML és AI trendek, eszközök és módszertanok folyamatos követése és alkalmazása

Ezeket várjuk el Tőled:

- BSc/MSc diploma (informatika, mérnökinformatikus, villamosmérnök, matematikus vagy kapcsolódó területen)
- Minimum 5 év releváns tapasztalat gépi tanulási modellek fejlesztésében és éles környezetbe helyezésében
- Mély ismeretek Pythonban, beleértve az ML és AI fejlesztéshez szükséges könyvtárakat (pl. TensorFlow, PyTorch, Scikit-learn)
- Tapasztalat ML modellek deployálásában és skálázásában (pl. Docker, Kubernetes, MLflow, Kubeflow)
- Jó adatbázis-kezelési ismeretek (pl. SQL, NoSQL)
- Tapasztalat felhőalapú ML megoldásokkal (AWS, Azure, GCP)
- Erős analitikai gondolkodás és problémamegoldó készség
- Képesség nagy mennyiségű adat kezelésére és modellezésére
- Kiváló kommunikációs készség, különösen az ML modellek működésének és eredményeinek világos bemutatásában
- Középszintű angol nyelvtudás

Az álláshirdető által megadott követelmények

Mentés

Requirements

- At least 10 years of experience in IT, with a focus on data science and analytics
- Minimum of 5 years in senior leadership roles, such as Manager, Architect, or Lead, within Agile or hybrid environments
- Proven experience managing teams of 40 or more, ensuring productivity and alignment with project objectives
- Participated in at least 8 full project lifecycles or successfully launched 2 or more products or significant features to market
- Expertise in data engineering, including data preparation, modeling, and visualization for business applications
- Strong understanding of machine learning methodologies, including supervised and unsupervised approaches, and their implementation
- Demonstrated ability to create AI and ML strategies to address complex business problems
- Advanced knowledge of Python for data analysis, manipulation, and machine learning workflows
- Practical experience with PyTorch for building and deploying deep learning models
- Familiarity with TensorFlow for scalable machine learning development and deployment
- Solid experience with cloud platforms such as AWS, Azure, or GCP for managing and deploying data science solutions
- Exceptional English communication skills, with the ability to articulate technical concepts clearly and effectively

Nice to have

- Certifications in data science, machine learning, or cloud technologies to showcase expertise
- Experience integrating data science solutions with enterprise systems to enhance operational efficiency
- Knowledge of advanced visualization techniques or tools to effectively communicate insights to stakeholders

We offer

- Dynamic, entrepreneurial corporate environment
- Diverse multicultural, multi-functional, and multilingual work environment
- Opportunities for personal and career growth in a progressive industry
- Global scope, international projects
- Widespread training and development opportunities
- Access to LinkedIn Learning solutions
- Competitive salary and various benefits
- Advanced wellbeing and CSR programs, recreation area

Do you know someone interested in starting a

Jelentkezés [↗](#)

Mentés

Qualifications (Minimum Required)

- Bachelor's degree in statistics, mathematics, epidemiology, or another relevant field
- Fortrea may consider relevant and equivalent experience and successful project outcomes in lieu of educational requirements
- Proficiency in relevant programming language that meets current client demand (e.g., SAS, R, Python)
- Proficiency in SAS macro language
- Working knowledge of Microsoft Word, PowerPoint, and Excel
- Ability to solve problems independently
- Ability to follow defined processes
- Strong attention to detail
- Strong oral and written communication
- Team player mentality

Experience (Minimum Required)

- ≥3 years of health research data analysis experience

Preferred Qualifications

- Bachelor's degree or higher with a strong focus in statistics
- Experience conducting analyses of observational study data
- Proficiency in CDISC standards (e.g., writing SDTM and ADaM specifications)
- Experience applying CDISC standards to observational study data
- Analytic experience with existing secondary data sources (e.g., claims, hospital administration, electronic health records, registries)
- Ability to challenge conventional thinking to develop solutions

What we are looking for

- Bachelor's or Master's degree in Computer Science, Engineering, or a related field.
- 3-5 years of experience as a Machine Learning Engineer, with a strong track record of deploying models in production environments.
- Proficiency in Python, MLFlow and Spark would be considered an asset.
- Experience with cloud platforms (AWS, GCP, Azure). Experience with AWS Sagemaker would be preferred.
- Strong problem-solving skills and the ability to analyse complex data sets to derive actionable insights.
- Excellent communication skills, with the ability to explain complex concepts to both technical and non-technical stakeholders.

What we offer

- Fitness-wellness allowance 
- Company mobile phone for private use with 100 GB

Mentés

You Have

- Degree in a quantitative area or technology such as Mathematics, Physics, Computer Science, etc.
- Solid problem solving & math foundations and an interest in the financial industry
- Good programming skills in Python or in some other object-oriented programming language
- Advanced communication skills in English.

Requirements

- 3+ years of experience in Python software engineering, along with practical exposure to Life Sciences, Healthcare, Bioinformatics, Computational Biology or related domains
- Proficiency in Python and modern web/API frameworks (Django, Flask, FastAPI)
- Experience with scientific and analytical Python libraries (NumPy, Pandas, SciPy, scikit-learn) and/or a relevant M.Sc. or Ph.D. in Bioinformatics, Computational Biology or a related quantitative field
- Exposure to biological, biomedical or clinical data, including NGS, transcriptomics, proteomics, multi-omics or genomic data formats (FASTQ, BAM, VCF)
- Familiarity with integration of AI / ML models into production systems in data-intensive or regulated contexts
- Strong understanding of software design principles, data structures and algorithms
- Hands-on experience with cloud platforms (AWS, Azure or GCP)
- Strong analytical and problem-solving skills, with the ability to contribute to technical discussions and solution design
- Excellent communication skills and experience in cross-functional, international teams
- Fluency in English (both written and spoken) at a B2 level

What we are looking for

- Bachelor's in computer science, Machine Learning, Artificial Intelligence, or a related field. Master's or Ph.D. in AI would be considered a plus.
- At least 5 years of experience in the ML Field, have developed ML solutions and products, with significant experience in developing cutting edge platforms using Cloud (preferably AWS Sagemaker) to enable seamless evolution and standardized utilization of the Machine Learning by organization.
- Demonstrated expertise in managing complex Data/AI/ML projects and delivering results in a fast-paced environment.
- Proficiency in AI technologies, event driven and real time data analytics environments, development and utilization of machine learning algorithms, MLOps and online feature stores for real time low latency applications.
- Stay abreast of emerging trends and technologies in the AI and ML space to proactively implement improvements, suggest innovative ways and ensuring Betsson remains at the forefront of innovation in this dynamic field

- Stay abreast of emerging trends and technologies in the AI and ML space to proactively implement improvements, suggest innovative ways and ensuring Betsson remains at the forefront of innovation in this dynamic field.
- Excellent communication and leadership skills, capable of inspiring teams and translating complex AI concepts into clear business strategies to be communicated to different stakeholders at different levels of seniority and skills.

What You'll Bring:

- Bachelor's Degree in Computer Science or a related field, with 3 years working experience OR a Master's Degree in Computer Science or a related field, with 1 years working experience.
- Programming Language: Proficiency in Python.
- Solid understanding of data structures and algorithms.
- Proficient in Machine Learning, with a solid understanding of neural networks and the Transformer architecture.
- Familiar with foundational NLP tasks such as tokenization, Named Entity Recognition, and sentiment analysis.
- Experience with modern approaches built on pretrained language models - fine-tuning and transfer learning, text and token classification.
- Working knowledge of large language models, including prompting and retrieval-augmented generation (RAG).
- Experience or coursework in Deep Learning frameworks like PyTorch or TensorFlow.
- Strong problem-solving skills and a curiosity for learning new technologies.
- Good verbal and written communication skills.
- Familiarity with cloud platforms (e.g., Azure (preferable), AWS, or Google Cloud).
- Basic knowledge of containerization tools like Docker and orchestration platforms like Kubernetes.
- Interest in infrastructure-as-code tools like Terraform.
- Passion for exploring the intersection of NLP and emerging fields such as generative AI or multimodal systems.

Office Location: Budapest, Szép u. 2, 1053 Hungary

Our Story

At Meltwater, we believe that when you have the right people in the right environment, great things happen.

Our best-in-class technology empowers our 27,000 customers around the world to make better business decisions through data. But we can't do that without our global team of developers, innovators, problem-solvers, and high-performers

[Jelentkezés](#)[Mentés](#)

You May Be a Good Fit If You Have

- A Master's/ PhD degree in Computer Science, Machine Learning, Mathematics, Statistics or a related field.
- A detailed understanding of machine learning, deep learning (including LLMs) and natural language processing.
- Hands-on experience in training, fine-tuning and deploying large language models.
- Have prior experience working with vector databases, search indices, or other data stores for search and retrieval use cases.
- Significant experience building evaluation systems for LLMs or search.
- Familiarity with various information retrieval techniques, such as lexical search and dense vector search.
- The ability to work effectively in a fast in a environment where things are sometimes loosely defined.
- Want to learn more about machine learning research.
- This is neither an exhaustive nor necessary set of attributes. Even if none of these apply to you, but you believe you will contribute to kapa.ai, please reach out.

Location: Remote within Europe. We're a distributed team and welcome applicants based anywhere in Europe. We also have an office in Copenhagen for those who prefer working on-site or hybrid.

data science

Your profile

- Degree in Computer Science, Data Engineering, Artificial Intelligence or a comparable qualification
- Initial professional experience in developing or implementing AI, machine learning or data-driven solutions
- Good understanding of modern AI methods such as machine learning, NLP, large language models or generative AI, with a strong interest in applying them in business contexts
- Practical experience with cloud technologies, preferably Azure, as well as basic knowledge of containerization, CI/CD or MLOps concepts
- Ability to work effectively in interdisciplinary teams and communicate technical topics clearly to different stakeholders
- Structured, pragmatic and solution-oriented way of working, with curiosity and willingness to continuously learn and develop
- Very good written and spoken English skills; German language skills are an advantage

[Jelentkezés](#)[Mentés](#)

We're seeking candidates with:

- 5+ years of experience in **ML/AI**, with a strong focus on production-grade computer vision and deep learning models
- Expert-level **Python** and PyTorch skills
- Deep knowledge of scalable ML systems, data lifecycle management, and MLOps practices
- Proven technical leadership experience, including mentoring engineers, leading projects, or guiding ML teams
- Strong architectural thinking and the ability to make pragmatic technical decisions
- Strategic thinking and excellent communication skills
- A passion for sustainability and real-world applications of ML
- Experience with complex algorithms and large-scale data processing

We value if you have experience in:

- Managing, mentoring, or helping build small ML teams
- Remote sensing, GIS, LiDAR, or point cloud data
- Workflow orchestration tools such as Airflow
- DevOps practices and tools, including Docker and Kubernetes
- Cloud ML environments, especially Azure
- Technical hiring, interviewing, and team scaling

Requirements:

What We're Looking For:

- Proven experience in data analysis and proficiency in relevant tools and languages (ex: **Python**, **SQL**, ...).
- Excellent communication skills and the ability to collaborate effectively with team members and stakeholders.
- Can-do attitude with strong inclination towards automation of routine work.
- Familiarity with big-data analysis techniques and experience working with large datasets.
- Hands-on experience in deploying changes, updates, and enhancements to systems.
- Good skills for report writing and presenting findings.
- Familiarity with modern AI tools to support one's own work.
- The ability to multitask, prioritize workload, and manage time effectively.
- Strong analytical skills with the ability to collect, organize, analyse, and disseminate information with attention to detail and accuracy.
- Capability to contribute to the team ways of working, introducing or improving existing processes.
- Mentoring team-members and colleagues.

What Will Make You Stand Out:

- Experience with AWS services.
- Experience with CI/CD pipelines.
- Familiarity with machine learning concepts.
- Advanced understanding of network protocols, latest standards and trends.

Why Join CUJO AI?

- **Flexible Work** – Hybrid work model with flexible hours.
- **Modern Equipment** – Top-of-the-line development tools to do your best work.
- **Career Growth** – Conferences, training, books, and anything else you need to keep developing.
- **Performance Bonuses** – Company-wide annual bonus program.
- **Referral Rewards** – Earn up to €1,000 for referring new hires.

[Jelentkezés](#)[Mentés](#)

es szakteruletetekkel;

Mentés

Skills And Competencies

- 5+ years of experience in data analysis to understand complex linkages of safety data from various sources, preferably in a pharmaceutical, biotech, or healthcare setting. Experience working with safety databases required, experience with large healthcare datasets (e.g., EHR, claims, registry data) is a plus
- Proficiency in data extraction from the safety database (e.g. Argus Safety) and generating data insights using adequate digital tools.
- Ability to identify gaps and translate them into actionable plans, especially cross-functionally, through technological tools (e.g. GenAI, Copilot, automation tools, etc.) without compromising clinical integrity.

Education, Experience And Qualifications

- Degree in Data Science, Epidemiology, Biostatistics, Public Health, Computer Science, or a related field.
- Familiarity with data visualization tools such as Tableau or Power BI, safety signal tools such as Empirica, or cloud-based data platforms.
- Proficiency in statistical programming languages (e.g., R, SAS, Python) is a plus.
- Minimum of 5 years working in pharmaceutical/ biotech industry.
- Experience in regulated environments (both GCP and GVP).
- Experience in RWE generation, pharmacoepidemiology and/or rare disease is a plus.
- Ability to travel up to 20% of time as needed.

Your Qualifications, Your Influence

To be successful in this role, you should have:

- PhD in Computer Science, Machine Learning, Artificial Intelligence, Computational Linguistics, Applied Mathematics, Data Science, or a closely related technical field
- 8+ years of professional experience in machine learning, artificial intelligence, or NLP
- 5+ years of hands-on experience building NLP models for production or near-production systemsDeep understanding of modern neural network architectures, including RNN, CNN, Transformer-based architectures, attention mechanisms, embeddings, fine-tuning strategies, layers, modules, and loss functions
- Strong practical experience with NLP tasks such as NER, classification, text generation, semantic similarity, information extraction, and document understanding
- Strong experience with Large Language Models, including model evaluation, prompt design, fine-tuning, retrieval-augmented generation, and safe production usage
- Practical understanding of RAG, GraphRAG, knowledge graphs, embeddings, and hybrid retrieval approaches for production LLM applications
- Strong hands-on experience with Python
- Strong experience with PyTorch and Hugging Face Transformers
- Experience with ONNX or other model optimization / model serving formats
- Strong understanding of data preparation, data quality, labeling workflows, annotation guidelines, and model evaluation metrics
- Practical experience with main data analysis and machine learning libraries, including Pandas, NumPy, SciPy, scikit-learn, and Matplotlib
- Experience working with SQL databases and structured business data
- Experience with cloud platforms such as Microsoft Azure or AWS
- Ability to design experiments, define success metrics, compare model approaches, and explain trade-offs clearly
- Strong written and verbal English communication skills
- Experience working in Agile engineering environments
- Ability to provide technical leadership without requiring formal people management authority

Preferred Skills and Technical Familiarity

- The following experience will be helpful:
- Experience leading NLP or AI research initiatives in a commercial production environment
- Experience with multilingual NLP systems
- Experience with vector databases, embeddings, semantic search, and RAG architectures
- Experience with knowledge graph concepts, including entity and relationship modeling, graph schema design, traversal queries, and LLM integration with graph databases such as Neo4j, FalkorDB, or similar technologies
- Experience with model serving, monitoring, drift detection, and production ML observability
- Experience with Docker and containerized ML workloads
- Experience with MLOps practices and CI/CD for machine learning systems
- Experience working with data annotation teams and creating annotation instructions
- Experience with .NET / C#, ASP.NET Core, or integration of ML services into enterprise software platforms
- Experience building prototypes, demos, and proof-of-concept applications for new AI capabilities
- Publications, patents, or recognized technical contributions in NLP, machine learning, or applied AI are a plus

Az álláshirdető által megadott követelmények

- 8+ év munkatapasztalat: Natural Language Processing (NLP)
- Doctor of Philosophy

software engineers who design, implement, back-test, deploy and measure sophisticated automated trading components and systematic trading strategies. Working closely with other Strategists and trading desks, they rapidly provide new solutions and bring efficiencies and quantitative edge to existing business processes within a dynamic market-driven environment.

You Have

- Degree in a quantitative area or technology such as Mathematics, Physics, Computer Science, etc.
- Solid problem solving & math foundations and an interest in the financial industry
- Good programming skills in Python or in some other object-oriented programming language
- Advanced communication skills in English.

About Us

Morgan Stanley is a global financial services firm and a market leader in investment banking, securities, investment management and wealth management services.
