

What we ask:

Hard requirements:

- 0-2 years of work experience
- Strong academic background from a relevant university
- Bachelor's or Master's degree in a data related field (completed degree before the 1st of March, 2027)
- Fluency in English

Personality & Mindset:

- Reflective, adaptable and eager to learn
- Collaborative mindset
- Open to relocation (domestic/international)
- Relevant extracurricular, internship or work experience that shows leadership potential
- Ability to handle pressure in fast-paced environments

What we offer:

- Two challenging roles in your home country, each lasting 18 months, where you can contribute to business priorities and build broad GDBS experience
- An extensive virtual learning journey together with a global cohort of trainees from different countries and functions
- A strong trainee community where you can build an international network and learn from peers across the business
- A fast start to your development by strengthening your business acumen, supply chain expertise and leadership capabilities

Vacancy description:

As a GDBS Trainee, you will contribute to the global ambitions of FrieslandCampina GDBS (Global Data & Business Services), where technology, data, and business operations come together to drive transformation across the company. GDBS delivers

[Jelentkezés](#) 

[Mentés](#)

**Who You Are — Required & Preferred Qualifications**

- 5+ years of experience as a data engineer (or similar), with significant exposure to cloud-based data platforms and modern data architectures.
- Proven hands-on experience building and managing data pipelines using Azure Databricks (PySpark + SQL) in real-world production environments.
- Strong understanding and practical experience with data modeling, data warehousing / lakehouse architecture (e.g. dimensional modeling, star/snowflake schemas, Delta Lake / Lakehouse).
- Proven track record in data governance, metadata management, and ensuring data quality at scale.
- Solid experience in performance optimization and troubleshooting of data processing jobs / pipelines (Spark/Databricks).
- Excellent programming and query skills — strong SQL, Python (or another relevant language); ability to write clean, efficient, maintainable code.
- Strong analytical and problem-solving skills; ability to think at both micro (pipeline/job level) and macro (architecture/strategy) levels.
- Excellent communication skills: able to explain complex technical issues to non-technical stakeholders, collaborate across teams, and influence architectural decisions.
- Self-motivated, responsible, and capable of working independently and as a technical leader in a structured data platform environment.

Preferred / Nice to Have:

- Prior experience working in regulated domains or sectors with strong compliance requirements (e.g. Finance, Asset Management, Pensions).
- Previous involvement in platform modernization or cloud migration projects.
- Familiarity with additional big data / data-engineering tools and patterns beyond Spark / Databricks — streaming, real-time data ingestion, advanced orchestration, metadata tooling, monitoring & alerting.
- Experience mentoring or leading smaller data engineering teams / peers; championing best practices, code reviews, architecture governance.
- Familiarity with CI/CD for data workflows, preferably with Azure DevOps (or similar), including infrastructure-as-code (Terraform / ARM templates).
- Experience with Azure Data Services such as ADF, ADLS, Synapse (or comparable cloud data services).
- Employ infrastructure-as-code (e.g. Terraform or ARM templates) to provision, manage, and version cloud infrastructure and data platform resources.

What We Offer For You

- Participation in full-cycle and diverse international projects
- Opportunity to work as a specialist or manager/team lead
- Constant career development with internal mentorship
- Access to a whole set of learning platforms, paid certifications
- Flexible working conditions, home working is allowed
- Attractive base salary & Wide range of benefits

[Jelentkezés](#)[Mentés](#)

What You Bring

- You are currently enrolled at a university or university of applied sciences, preferably studying software engineering, computer science, AI, or a related IT field.
- You have hands-on experience with Python and/or TypeScript / Node.js / React.
- Familiarity with LLMs, AI agent frameworks, SAP BTP, or cloud platforms is a strong plus.
- Experience with Agile/Scrum practices and tools (e.g., JIRA or similar) is an advantage.
- You are fluent in Hungarian and English.
- You bring strong soft skills: collaborative, well-organized, curious, and enthusiastic about AI and emerging technologies.
- You are flexible and able to thrive in a fast-moving, ambiguous environment.

Meet your team

You will join the CE3 multi-disciplinary unit within the C&P CPIT organization – a team dedicated to delivering innovative, enterprise-grade Agentic AI solutions. The team drives cross-functional

[Jelentkezés](#)[Mentés](#)

**Future Talent**

Deligo • Budapest, Hungary (Hybrid)

**We are interested in professionals with expertise in**

- AI and Machine Learning
- Computer Vision
- Software Engineering
- UX/UI Design
- Product Management
- Business Development
- Human Resources
- Customer Support and Customer Success
- Operations
- Other roles that help build and scale innovative technology businesses

What makes you a great fit

- You are excited by startups, innovation, and the opportunity to help build something meaningful from the ground up
- You thrive in fast-paced environments where priorities evolve, challenges emerge quickly, and adaptability is key
- You take ownership, act proactively, and are motivated by making a tangible impact rather than simply completing tasks
- You are passionate about technology and creating products that improve everyday experiences
- You enjoy solving complex problems and consistently strive to deliver high-quality results
- You are curious, eager to learn, and continuously looking for ways to improve
- You collaborate effectively with people from different backgrounds and disciplines
- You have a hands-on attitude and are willing to step outside your comfort zone when needed
- You are driven by ambitious goals and motivated by continuous growth and improvement

Bonus

- Experience working in a startup or scale-up environment
- Experience in retail technology, food-tech, AI, or related industries
- International experience or working in cross-functional, multicultural teams

Why join us

- Opportunity to join at an early stage, making a visible impact in a fast-scaling startup
- Real influence on how our products and processes evolve, with freedom to innovate
- A collaborative, creative, and transparent culture where contributions are recognized
- A spacious, shiny, dog-friendly office in the heart of Budapest with great transport, tasty snacks, and vibrant team events
- High-tech equipment
- Flexible working hours and hybrid approach
- Competitive salary

If you're ready to help build a truly seamless and magical checkout experience, we encourage you to

Engineering Lead - Wise AI Assistant Pl...

Wise • Budapest, Budapest, Hungary (On-site)

Qualifications

You bring:

- 2+ years leading engineering teams, ideally including senior engineers
- Strong, hands-on technical experience in OOP Languages (Java) and modern technology stacks on technologies such as REST APIs, microservices, distributed systems and CI/CD pipelines - you will have to complete technical interviews to showcase your knowledge.
- Solid understanding of LLM engineering: RAG architectures, vector databases & embeddings, prompt/context engineering, orchestration patterns, tool use, evaluation methods and guardrails/safety approaches.
- Passion for AI: you follow the space, and want to push boundaries on a production system at scale
- Excellent collaboration skills across functions and teams
- Bonus: TypeScript, deeper AI fundamental (eg. transformer architectures, fine tuning, etc).

Additional Information

For everyone, everywhere. We're people building money without borders — without judgement or prejudice, too. We believe teams are strongest when they are diverse, equitable and inclusive.

We're proud to have a truly international team, and we celebrate our differences.

Inclusive teams help us live our values and make sure every Wiser feels respected, empowered to contribute towards our mission and able to progress in their careers.

If you want to find out more about what it's like to work at Wise visit [Wise.Jobs](#).

Keep up to date with life at Wise by following us on [LinkedIn](#) and [Instagram](#).

Jelentkezés [↗](#)

Mentés

**Requirements-**

- University/College degree in Information Technology / Economics / Engineering
- MDG systems (e.g. SAP MDG, Simple MDG, Prospecta MDG, Evolve etc.) knowledge / experience
- Java, SQL, PL/SQL, XML, XSLT, ABAP;
- SOAP, REST, API, ETL tools, message queue systems
- Relational databases (Oracle, MS SQL, MySQL), NoSQL databases (MongoDB, Cassandra)
- Data preparation (ETL)- Cleaning, transforming, and structuring raw data (e.g., using Pandas).
- Version control (Git, SVN)
- Strong customer focus
- Ability to learn business processes, analytical and problem-solving skills
- Communication (incl. documentation) both in English and Hungarian
- Self-dependence, results orientation, effective time and task management
- Experience in IT projects -migration tasks and data transformation execution support

Advantageous Skills-

- Programming languages- Confident, daily use of Python and R.
- Big Data technologies- Familiarity with Apache Spark, Hadoop, and Hive for handling massive datasets.
- Machine Learning- In-depth knowledge of supervised and unsupervised algorithms (regression, classification, clustering).
- Data visualization- Creating reports and dashboards (Tableau, Power BI, Matplotlib, Seaborn)

What We Can Offer-

- Being part of a people-focused organization
- Professional and soft skill trainings and career opportunities within MOL Group
- Hybrid working / home office possibilities, MOL Campus facilities
- Annual bonus
- Maximalized - Gross 800.000 HUF - annual fringe benefits (with elements of SZÉP card, All you can move card, culture and sport event, health and pension insurance allowance, etc)
- Loyalty bonus (after 3 years of employment)
- Support at all stages of family life – baby born allowance, extra paid paternity leave, paid leave for single parents, MOL Égigerő kindergarten support and MOL Campus Égigerő daycare, school start support, student loan support)Support in difficult situations (health insurance support for employees with disability,advance salary payment, etc.)
- Preparation for retirement (pre-retirement support, pensioner benefits, company loyalty program)
- Awards and recognitions (extra leave days, project reward, leadership reward, etc.)
- Support for physical and mental well-being (fitness center, health programs and company

Requirements

- Background in data DevOps engineering with a minimum of 3 years of practical experience
- Knowledge of Azure DevOps CI/CD pipelines, Terraform, and deployment strategies for large infrastructures
- Expertise in deploying Databricks workflows using Databricks Asset Bundles
- Competency in developing data pipelines on Azure Databricks with Spark
- Capability to design and sustain scalable data platforms for large-scale consumers
- Proficiency in Python programming
- Skills in collaboration to work effectively with architects and other technical professionals
- English competency at an intermediate level or higher

Nice to have

- Experience in creating preliminary prototypes for new product functionalities
- Background in designing data set processes for governance, production, and data modeling
- Familiarity with multiple programming languages and tools for seamless system integration

We offer

- Dynamic, entrepreneurial corporate environment
- Diverse multicultural, multi-functional, and multilingual work environment
- Opportunities for personal and career growth in a progressive industry
- Global scope, international projects
- Widespread training and development opportunities

[Jelentkezés](#) 

[Mentés](#)

What You Will Bring:

- **5+ years of experience in data engineering** or a related role
- Experience with **AWS Glue, Amazon Redshift, AWS Lambda, AWS Step Functions**, Amazon S3, Amazon SNS
- Experience implementing **CDC solutions**
- Strong understanding of Medallion Architecture and modern data lake concepts
- Strong knowledge of **Python/PySpark**
- Expertise in **SQL** and experience **optimizing large-scale queries**
- Good understanding of **IAM, security**, and **cloud-native AWS services**
- Familiarity with **data warehousing concepts** and technologies
- Experience with **data integration** and **transformation** tools

What Would Be Nice To Have:

- Experience with Infrastructure as Code (Terraform or CloudFormation)
- Knowledge of data governance and data quality frameworks
- Experience with streaming/event-driven architectures
- AWS certifications

About Your Contract:

- 40 hours/week
- Full-time, indefinite contract
- **Location: Budapest, Hungary**
- Hybrid working model with 2-3 office days per week
- Occasional travel to customer locations across Europe
- Onboarding and acclimatization period provided

Mentés

← Preferenciák egyezése

Preferenciák

- ☒ Hybrid
- ☒ Teljes munkaidős

Készségek

- ☒ Python (Programming Language)
- ☐ Data Engineering
- ☐ SQL Server Reporting Services (SSRS)
- ☐ Extract, Transform, Load (ETL)
- ☐ Databases
- ☐ Data Warehousing
- ☐ AWS Glue
- ☐ Amazon Redshift
- ☐ AWS Lambda
- ☐ Infrastructure as code (IaC)

Qualifications

Required skills & experience:

- University degree in Computer Science, Engineering, Mathematics, Physics, ML, or similar
- Solid mathematical foundations (e.g.: linear algebra, trigonometry, discrete math)
- Hands-on experience with C/C++, Python, and/or MATLAB
- Experience with software testing and scripting
- Analytical mindset and structured way of working
- Fluent English (daily communication with international teams)
- Strong interest in automated driving technologies
- Willingness to work in international projects and travel occasionally

Nice to Have

- Experience in automotive software development
- Embedded systems background
- Knowledge of software architecture, UML, and best practices
- Ability to plan, estimate, and prioritize tasks independently
- Familiarity with Git, Jira, Azure
- Knowledge of sensor fusion, tracking algorithms, or machine learning

Additional Information

Get to know our benefits.

We would like to help you **GROW**, so we offer you:

- Financial security & recognition: We review and increase your competitive base salary annually, offer performance-, loyalty-, and referral bonus.
- Trainings and professional development: We believe in a Life-Long Learning approach, so you can take advantage of several technical and soft skill trainings and language courses.
- Career development: We have a wide range of programs to choose from, even if its leadership, expert or project development you are aiming for. We also offer mentoring and coaching opportunities, we have PhD program and we offer international assignment possibilities.

Qualifications

Required

- Master's degree in Electrical Engineering, Imaging Science, Computer Vision, Applied Physics, or a closely related field.
- Five to seven years of professional experience in image sensor engineering, computational photography, or camera systems development, with hands-on contributions to shipped products.
- Solid hands-on experience with iOS camera APIs (AVFoundation, AVCaptureSession, RAW capture, DNG output) and Android Camera2 / CameraX.
- Working knowledge of image sensor physics: photon transfer curves, full-well capacity, read noise, dark current, quantum efficiency, and Bayer CFA design.
- Solid grounding in color science: CIE XYZ, sRGB, camera RGB, chromatic adaptation, and ICC/DNG color profiles.
- Proficiency in image processing fundamentals: demosaicing, denoising, HDR, tone mapping, and artifact correction.
- Strong programming skills – Python (NumPy, OpenCV, scikit-image, rawpy) and Swift or Kotlin/Java for mobile development; C/C++ for performance-critical modules.
- Experience with exposure and ISO optimization to maximize dynamic range and SNR across a wide spectral range.
- Ability to handle confidential and pre-patent technical material with discretion, and to follow the Company's IP and data-handling policies rigorously.
- Fluency in English (written and spoken); able to work full-time in Budapest, Hungary.

Strongly Preferred

- PhD in a relevant research area.
- Demonstrated experience in sensor calibration using mathematical optimization such as Levenberg-Marquardt, bundle adjustment, or non-linear least-squares (e.g., OpenCV calibrateCamera).
- Experience with hyperspectral or multispectral imaging systems, spectral reconstruction, or spectral unmixing.
- Familiarity with SLAM (e.g., ORB-SLAM, ARKit / ARCore) for self-supervised pose estimation and dynamic calibration.
- Background in medical imaging, clinical image quality standards, or FDA / CE-regulated imaging device development.

Compensation

In accordance with Hungary's implementation of the EU Pay Transparency Directive (Directive (EU) 2023/970):

- Salary range: HUF 2,000,000 – HUF 2,500,000 gross per month, depending on experience and demonstrated technical depth.
- Discretionary performance bonus, with details discussed with shortlisted candidates.
- Statutory and customary Hungarian benefits.

Compensation decisions are made on the basis of objective, gender-neutral criteria, including relevant experience, technical skills, scope of responsibility, and demonstrated performance. The Company does not request salary history during the recruitment process.

Riasztás beállítása hasonló állásokhoz

 Egyszerű jelentkezés

Mentés

What Success Looks Like

- Platform architecture is well-defined, scalable, and consistently implemented across all components
- Complex SQL and Python pipelines you build serve as reference implementations and team standards
- Architectural decisions accelerate team delivery and reduce technical debt
- Complex issues are resolved permanently through architectural fixes, not workarounds
- Data flows efficiently through well-governed, well-structured architecture layers
- Infrastructure is robust, scalable, and fully automated through Infrastructure as Code (IaC)
- CI/CD and infrastructure processes are architected for reliability, speed, and auditability
- Senior and Junior engineers grow under your mentorship and adopt your engineering standards
- Platform capabilities continuously evolve in performance, maturity, and self-service enablement

What You Need To Be Successful

- Expert-level SQL development skills – capable of authoring complex transformations, performance-tuning queries, and defining SQL development standards for the team
- Expert-level Python development skills – capable of building production-grade pipeline frameworks, utilities, and data processing logic
- Deep experience with PostgreSQL, relational databases, and SQL-based transformation logic
- Extensive experience architecting and building data pipelines, ETL/ELT, and data processing workflows end-to-end
- Experience architecting, implementing, and governing Infrastructure as Code using tools such as Terraform, Pulumi, ARM/Bicep, CloudFormation, or similar
- Deep experience with PySpark, Spark, Databricks, or distributed data processing at scale
- Extensive hands-on experience with cloud platforms (AWS, Azure, Databricks) at an architectural level
- Proven ability to design, implement, and govern CI/CD pipelines and DevOps practices at enterprise scale
- Strong experience with Git workflows, branching strategies, and source control governance
- Advanced troubleshooting, performance engineering, and optimization skills
- Deep experience designing, building, and troubleshooting APIs and complex data integration patterns
- Experience designing highly available, fault-tolerant distributed systems at enterprise scale
- Strong understanding of data governance, metadata management, lineage, and data quality architectures
- Experience with streaming and event-driven architectures
- Demonstrated ability to mentor, lead, and elevate engineering teams through technical authority and hands-on contribution

Bonus Points if You Have

- Experience architecting enterprise-scale Lakehouse platforms using Databricks, Delta Lake, Unity Catalog, and Delta Live Tables (DLT)
- Experience with real-time and event-driven data architectures using Kafka, Event Hubs, Kinesis, or similar streaming technologies
- Experience implementing data observability, lineage, and monitoring platforms (e.g., Monte Carlo, Datafold, OpenLineage, Unity Catalog)
- Experience designing and enforcing DataOps practices, data contracts, and domain-oriented data ownership models
- Experience with containerization and orchestration technologies such as Docker and Kubernetes
- Experience building platform engineering capabilities including self-service infrastructure, reusable platform components, and internal developer platforms
- Experience implementing enterprise security architectures including RBAC, secrets management, encryption, and zero-trust principles
- Experience optimizing cloud cost, performance, and capacity planning for large-scale data platforms
- Experience supporting AI/ML platforms, feature stores, model deployment infrastructure, or MLOps tooling
- Experience with modern software engineering practices including test automation, platform reliability engineering, and Site Reliability Engineering (SRE) principles
- Experience with metadata management, data catalogs, lineage, and governance frameworks
- Experience leading large-scale platform modernization, cloud migration, or data platform transformation initiatives
- Experience working in manufacturing, automotive, supply chain, IoT, or other data-intensive enterprise environments
- Contributions to open-source projects, technical publications, conference presentations, or recognized industry thought leadership
- Bachelor's degree in Computer Science, Software Engineering, Information Systems, or related field; Master's degree preferred

What We Offer

- Work in international teams with the world's largest automotive manufacturers.
- Use HARMAN Flex – choose the right working model fitting their job (Hybrid or Office)
- Access career development opportunities and get both on the job training on high-end automotive projects, as well as extensive technical trainings.
- Access HARMAN Webchat with large scale user

You Should Have

- BA/BS required with degrees in quantitative, finance or economics disciplines preferred
- Desire to learn more about the Investment Management industry
- Fluency in written and spoken English is essential; additional European languages are a plus
- Strong attention to detail, a sense of urgency around deadlines and an ability to multitask
- High proficiency in Excel, with ability to manipulate data in a spreadsheet (knowledge of macros is a plus) and PowerPoint, with ability to create appealing slides for clients/investors
- Strong data management and manipulation skills; Experience with Python or other coding languages
- Proactive, problem-solving attitude supported by the ability to effectively combine outputs from different sources of technology/systems
- Keen interest in global financial markets; be up to date on macro events and market trends
- A desire to pursue CFA, FRM and/or CAIA is welcome

The salary range for Hungary is 9785000 - 13400000 HUF

Additionally, employees are eligible for an annual discretionary bonus, and benefits including healthcare, leave benefits, and retirement benefits. BlackRock operates a pay-for-performance compensation philosophy and your total compensation may vary based on role, location, and firm, department and individual performance.

Our Benefits

To help you stay energized, engaged and inspired, we offer a wide range of employee benefits including: retirement investment and tools designed to help you in building a sound financial future; access to education reimbursement; comprehensive resources to support your physical health and emotional well-being; family support programs; and Flexible Time Off (FTO) so you can relax, recharge and be there for the people you care about.

Our hybrid work model

Jelentkezés 

Mentés

Ideal Candidate Profile:

We are seeking a highly skilled, senior-level Data Engineer with extensive experience in cloud data platforms, data pipelines, and software engineering practices.

Must-Have Skills & Experience:

Databricks: Advanced PySpark, Spark SQL, Delta Lake, Unity Catalog, workload automation
Azure Data Factory: Pipeline creation, orchestration, parameterization, performance tuning
SQL & Data Modelling: Strong analytical SQL, window functions, performance optimization
Python: Production-quality code, modular design, testing, reusable libraries
Software Engineering: Version control (Git), pull requests, code reviews, structured development
CI/CD: Azure DevOps pipelines, environment promotion automation
Data Pipeline Testing: Validation, unit/integration testing, data quality assurance
Documentation & Maintainability: Clear, well-structured code with comprehensive documentation
Strongly Preferred Skills:

AI-assisted development tools such as GitHub Copilot or similar
AI-capable Databricks features (e.g., Genie, Mosaic AI, dashboards)
DataOps practices, Infrastructure-as-Code (Terraform, Bicep, DABs)
Prompt engineering for AI workflows
Containerization (Docker) and basic Kubernetes knowledge
Power BI reporting, Azure gateway configuration

Nice-to-Have Skills:

Basic geoscience domain knowledge (drillhole, geochemistry data)
Workflow orchestration tools such as Argo Workflows
Data governance, metadata management, lineage tracking

Why Join Us?

This is an excellent opportunity to contribute to a cutting-edge geoscience data platform within a global leader in mining. You'll work in a collaborative environment, utilizing the latest cloud and AI technologies, and have the chance to influence data-driven decision-making at a strategic level.

Az álláshirdető által megadott követelmények

What You'll Bring To The Role

- 10+ years of experience ideally with strong exposure to regulatory capital, counterparty credit risk, derivatives risk, market risk, stress testing, capital analytics, or finance control.
- Solid understanding of Basel capital frameworks and derivatives products, ideally including SA-CCR, BA-CVA, FRTB, or CCAR.
- Strong analytical mindset with the ability to translate complex risk and regulatory topics into clear business insights.
- Experience working with large datasets, capital calculations, controls, reporting processes, or model governance activities.
- Confidence in partnering with senior stakeholders across Finance, Risk, Technology, Model Risk, and Business teams.
- Excellent communication skills with the ability to explain technical topics clearly to diverse audiences.
- A continuous improvement mindset, with a keen interest in automation, data quality, and scalable process design.
- Proficiency in SQL, Alteryx, VBA, Excel, Bloomberg, Python, or AI-enabled analytics is an advantage. Degree in Accounting, Finance, Economics, or a related field preferred.

Why Join Us

- Take ownership of a senior Budapest-based role with strong global visibility
- Apply your derivatives and counterparty credit risk expertise to strategic capital decisions
- Work on high-priority initiatives linked to SA-CCR, BA-CVA, Basel III Endgame, and stress testing
- Collaborate with international teams across Risk,

[Mentés](#)

Dein Profil

Wir suchen einen qualifizierten **Data Engineer** mit ausgeprägter Expertise in modernen Data-Engineering-Tools, Cloud-Technologien und der Entwicklung von Datenpipelines sowie einem soliden Bildungshintergrund in Informatik, Ingenieurwesen oder verwandten Bereichen. Der ideale Kandidat verfügt über umfangreiche Erfahrung im Aufbau skalierbarer Datenlösungen, der Sicherstellung von Datenqualität und der Zusammenarbeit mit funktionsübergreifenden Teams.

Muss-Kriterien

- Bachelor- oder Master-Abschluss in Informatik, Ingenieurwesen, Informationstechnologie, Naturwissenschaften, Mathematik, Wirtschaft oder gleichwertige Berufserfahrung im IT-Bereich
- Ausgeprägte Expertise in modernen Data-Engineering-Tools und -Technologien, einschließlich DeltaLake, SQL, Python, Tableau, QuickSight, Kafka, Apache Flink, Apache Doris, Superset und Schema Registry für Datenverarbeitung, Analytik und Visualisierung
- Erfahrung im Design und Aufbau skalierbarer ETL/ELT-Datenpipelines, die Daten aus mehreren Systemen extrahieren, transformieren und in zentralisierte Data Warehouses oder Data Lakes laden, während Zuverlässigkeit und Performance sichergestellt werden
- Praktische Kenntnisse in der Integration von Daten aus verschiedenen Quellen wie Datenbanken, APIs, Streaming-Plattformen und NoSQL-Systemen unter Verwendung von Tools wie MongoDB Atlas, Debezium und Kafka Connect für CDC und Echtzeit-Datenstreaming
- Fähigkeit, Daten-Workflows zu automatisieren und zu optimieren, die Pipeline-Gesundheit zu überwachen und Infrastruktur- oder Verarbeitungsprobleme zu beheben, um kontinuierliche, effiziente und leistungsstarke Datenoperationen sicherzustellen
- Ausgeprägte Fähigkeiten in Datenmodellierung und Datenarchitektur, einschließlich des Designs von Schemas, der Aufrechterhaltung von Datenkonsistenz und der Implementierung skalierbarer Speicherlösungen für großangelegte Analyseumgebungen
- Expertise im Datenqualitätsmanagement, einschließlich Validierung, Bereinigung, Harmonisierung und Governance-Praktiken, um genaue, konforme und vertrauenswürdige Datensätze über Systeme hinweg sicherzustellen
- Solides Verständnis von Cloud- und Infrastruktur-Engineering, insbesondere AWS-basierte Compute- und Speicherumgebungen, mit Erfahrung in der Optimierung von Skalierbarkeit, Zuverlässigkeit, Sicherheit und Kosteneffizienz
- Praktische Erfahrung mit Containerisierung und Infrastructure-as-Code-Technologien wie Docker, Kubernetes und Terraform zur Bereitstellung, Verwaltung und Automatisierung skalierbarer Infrastrukturmgebungen
- Kenntnisse in Sicherheits-, Compliance- und Zugriffsverwaltungspraktiken, einschließlich RBAC, IAM, Verschlüsselung, Anonymisierung und Einhaltung von Vorschriften wie GDPR und CCPA
- Ausgeprägte Kollaborations- und Betriebsfähigkeiten, einschließlich enger Zusammenarbeit mit Analysten, Data Scientists und Stakeholdern, während du mehrere Prioritäten managst und über neue Trends und Best Practices im Data Engineering auf dem Laufenden bleibst
- Ausgezeichnete schriftliche und mündliche Kommunikationsfähigkeiten in englischer Sprache
- Kenntnisse in Jira und Confluence

Von Vorteil

- Erfahrung in der Arbeit in SAFe-Umgebungen
- Deutschkenntnisse

Über uns

Als **attraktivster Arbeitgeber Ungarns 2025** (laut repräsentativer Umfrage von Randstad) ist **Deutsche Telekom IT Solutions** eine Tochtergesellschaft der Deutsche Telekom Gruppe. Das Unternehmen bietet mit mehr als 5300 Mitarbeitern ein breites Portfolio an IT- und Telekommunikationsdienstleistungen. Wir haben Hunderte von Großkunden und Unternehmen in Deutschland und anderen europäischen Ländern.

DT-ITS erhielt 2019 den **Best in Educational Cooperation Award von HIPA** und wurde als **ethischstes multinationales Unternehmen 2019** anerkannt. Das Unternehmen entwickelt seine vier Standorte in Budapest, Debrecen, Pécs und Szeged kontinuierlich weiter und sucht qualifizierte IT-Fachkräfte, die Teil des Teams werden möchten.

Weitere Details

Bitte beachte, dass unsere Remote-Work-Möglichkeit aufgrund europäischer Steuerbestimmungen nur innerhalb Ungarns verfügbar ist.

Qualifications

- Strong organization and time-management skills, with the ability to swiftly transition between projects and tasks
- Ability to work independently, be self-motivated, and have accountability/ownership of projects
- Excellent communication (verbal and written) and interpersonal skills
- Advanced MS Office skills (Excel, PowerPoint, Word)
- Knowledge of Python, SQL or Microsoft Macro/VBA is a plus
- Prior relevant risk management or regulatory experience
- Education: BA or BS

#BPDBA

What You Can Expect From Morgan Stanley

At Morgan Stanley, we raise, manage and allocate capital for our clients – helping them reach their goals. We do it in a way that's differentiated – and we've done that for 90 years. Our values - putting

Jelentkezés 

Mentés

What we're looking for

- Experience managing a team of data engineers, with accountability for their delivery, growth, and performance.
- Enough technical depth to be respected by strong engineers. You can interrogate a streaming architecture, spot the wrong trade-off in a data model, and recognise when the information you've been given doesn't add up.
- A background building and operating data platforms at scale: medallion architecture, event streaming, warehousing, and transformation frameworks like dbt, ideally where the data directly drives revenue or customer-facing data products.
- Experience coaching engineers across a wide seniority range, including retaining and stretching Staff-level talent.
- Exposure to machine learning. You've directly managed or supported ML engineers, understand the lifecycle of models in production, and can credibly lead an ML function as it grows.
- Comfort operating with high autonomy. You resolve ambiguity rather than wait for it to be removed.

Nice to have

- Experience with payments, fintech, or other finance-related domains.
- Familiarity with modern cloud data stacks. We work with technologies like Kafka, Snowflake, Firebolt, and dbt, though depth of engineering leadership matters more than any specific tool.
- Experience with cloud providers and tooling like AWS, Terraform, and Kubernetes.
- Familiarity with data mesh concepts. You understand domain-oriented ownership and treat data as a product, driving towards self-serve platforms.

You may not like it here

- Primer is remote-first. There's no office to walk into for context or a read on how things are going, and that applies doubly when you're the one your team looks to for direction.
- The team is small and the surface is broad. You'll own everything from real-time streaming to warehouse modelling with a handful of engineers, and prioritisation calls will be yours to make and defend.
- We keep the management layer thin. You won't have a large support structure above you removing obstacles, and you're expected to stay close enough to the technical work to lead it credibly.
- The ML function is early. You'll be shaping it as it grows rather than inheriting something established, and that means ambiguity about scope, tooling, and direction is part of the job.

A typical interview process

- An initial intro call with a Talent Partner
- An interview with the Hiring Manager

Jelentkezés [↗](#)

Mentés

Requirements

- 2+ years building and shipping real production software — you've put your work in front of real users
- Strong Python with hands-on experience building async REST APIs, FastAPI ideal (SQLAlchemy 2 async / asyncpg / Postgres a plus)
- You've built at least one real agent or RAG application and understand embeddings, vector search, chunking, and prompting in practice
- Comfortable across the stack — happy to jump into a React/TypeScript frontend as well as backend services
- Working knowledge of SQL / PostgreSQL and confident with Git-based team workflows
- Foundational AWS — you've deployed something and understand IAM roles and containers (Docker)
- Genuine curiosity for AI and hunger to learn new tech fast — you want to build a career at the frontier of AI engineering
- Strong written and verbal English, and you thrive in a fast-moving, fully remote team

Nice to Have

- Exposure to AWS Bedrock and agent frameworks such as LangChain/LangGraph
- Async Python and WebSocket/SSE streaming
- Frontend experience with React, TypeScript, Vite and MUI
- Infrastructure-as-code (Terraform or CloudFormation) and CI/CD pipelines
- Observability tooling such as CloudWatch, Grafana, or Prometheus

Interviewing with Veeva

We value your time and believe in a transparent hiring process. Here is the process you can expect.

- Follow the application process and submit your resume.
- Within 3 days, you will receive a link to a personality assessment administered by a third party.
- Once you complete the assessment, our team will review your full application package and follow up via email with our decision.
- If moving to the interview stage, the process is as

Data Engineer

HCLTech – Hungary • Budapest, Hungary (Hybrid)

Qualifications

We want to hear from you if You have:

- 3+ years of experience in data engineering
- solid knowledge of SQL and Python
- professional level of English (written and oral)
- excellent problem-solving, analytical, and communication skills
- experience with the following technologies:
 - Snowflake
 - Dbt
 - Airflow
 - Git or other version-controlling system(s)
- Intelligent, communicative team-player personality, interested in and willing to learn new skills and technologies.

Additional Information

What's In It For You:

Home Office: We work two days from the office and three days from home – but we don't check it, we don't track it and we don't decide which days you choose. We trust that you are the best judge of when and where you're most effective. But we'd still like to meet you every now and then because we believe in in-person relationships and "watercooler

Mentés

Required skills:

- 4+ years of experience in data engineering or backend development, with a strong focus on building production-grade data pipelines.
- 2-3+ years of experience working with AWS services (Administration of Redshift is a must),
- Solid experience working with AWS services (Spectrum, S3, RDS, Glue, Lambda, Kinesis, SQS).
- Proficient in Python and SQL for data transformation and automation.
- Experience with dbt for data modeling and transformation.
- Good understanding of streaming architectures and micro-batching for real-time data needs.
- Experience with CI/CD pipelines for data workflows (preferably GitLab CI).
- Familiarity with event schema validation tools/solutions (Snowplow, Schema Registry).
- Excellent communication and collaboration skills. Strong problem-solving skills—able to dig into data issues, propose solutions, and deliver clean, reliable outcomes.
- A growth mindset—enthusiastic about learning new tools, sharing knowledge, and improving team practices.

Tech Stack You'll Work With:

- Cloud: AWS (Redshift, Spectrum, S3, RDS, Lambda, Kinesis, SQS, Glue, MWAA)
- Languages: Python, SQL
- Orchestration: Airflow (MWAA)
- Modeling: dbt
- CI/CD: GitLab CI (including GitLab administration)
- Monitoring: Datadog, Grafana, Graylog
- Event validation process: Iglu schema registry
- APIs & Integrations: REST, OAuth, webhook ingestion
- Infra-as-code (optional): Terraform

Bonus Points / Nice to Have:

- Experience with additional AWS services: EMR, EKS, Athena, EC2.
- Hands-on knowledge of alternative data warehouses like Snowflake or others.
- Experience with PySpark for big data processing.
- Familiarity with event data collection tools (Snowplow, Rudderstack, etc.).
- Interest in or exposure to customer data platforms (CDPs) and real-time data workflows.

Candidate journey:  Recruiter call → 
Technical call with the hiring manager →  Meet the future stakeholders

Mentés

production-ready products.

What We're Looking For

- ✓ **7+ years of hands-on Python software engineering experience.**
- ✓ Strong software engineering fundamentals across **architecture, APIs, database design, testing and maintainable application development.**
- ✓ Experience building production-grade applications using **FastAPI, Flask, Airflow or similar technologies.**
- ✓ Proven experience using **AI coding assistants** while retaining ownership of engineering quality.
- ✓ **2+ years of hands-on experience building Generative AI solutions.**
- ✓ Ability to independently translate complex requirements and ideas into working software.

Particularly Valuable

- ★ Hands-on experience with **LLMs and AI Agents.**
- ★ **Retrieval-Augmented Generation (RAG)** architectures.
- ★ **LangGraph**, MCP and Agent SDKs.
- ★ Vector databases and workflow orchestration.
- ★ Internal developer platforms and productivity tools.
- ★ Enterprise automation.
- ★ Experience building secure and governed AI solutions in complex enterprise environments.

The Profile We're Looking For

You're a **builder first**.

You use AI as a force multiplier rather than a substitute for engineering expertise. You care about architecture, maintainability and code quality, but you're equally comfortable experimenting quickly and turning an idea into a practical solution.

If that sounds like you, we'd like to hear from you.

Apply with your updated CV.
