

You Have

- Bachelor or Masters preferred in Power Systems with OPF related courses
- 3+ yrs Experience in running Power flow Models like DAYZER or PLEXOS or similar ISO Market simulation OPF software
- Experience understanding the dispatch and congestion patterns in market and correlate with Model behavior
- Market familiarity for PJM or MISO or ERCOT desired
- Strong Excel proficiency and also visualization tools like Tableau or PowerBI
- Coding via Python preferred

BPMM

What You Can Expect From Morgan Stanley

At Morgan Stanley, we raise, manage and allocate capital for our clients – helping them reach their goals. We do it in a way that's differentiated – and we've done that for 90 years. Our values - putting clients first, doing the right thing, leading with exceptional ideas, committing to diversity and inclusion, and giving back - aren't just beliefs, they guide the decisions we make every day to do what's best for our clients, communities and more than 80,000 employees in 1,200 offices across 42 countries. At Morgan Stanley, you'll find an opportunity to work alongside the best and the brightest, in an environment where you are supported and empowered. Our teams are relentless collaborators and creative thinkers, fueled by their diverse backgrounds and experiences. We are proud to support our employees and their families at every point along

data science

Skills/experience:

- AWS Redshift and AWS Glue
- Monitoring tools (CloudWatch, Redshift Console)
- Data versioning, CI/CD, and collaborative development practices in dbt.
- Pyspark
- Data pipelines
- Apache Airflow

← Preferenciák egyezése

Preferenciák

- ☒ Remote
- ☒ Szerződéses

Készségek

- ☒ PySpark
- ☒ Apache Airflow

What You Will Bring:

- 5+ years of experience in data engineering
- Experience with **cloud data warehouse** environments
- Experience with **AWS Redshift**
- Hands-on experience with **PySpark** and **Apache Airflow**
- Strong **SQL** skills and deep understanding of query performance tuning in Redshift
- Solid understanding of **data modeling principles**, including dimensional modeling (Kimball), normalized models, and hybrid strategies
- Experience with monitoring tools (**CloudWatch**, **Redshift Console**)
- Familiarity with **data versioning**, **CI/CD**, and collaborative development practices in dbt

... and we appreciate if you have:

- Experience in Airflow, AWS Glue

About Your Contract:

- 40 hours/week
- Full-time, indefinite contract
- **Location: Budapest, Hungary**
- Hybrid working model with 1-2 office days per week
- Occasional travel to customer locations across Europe
- Onboarding and acclimatization period provided
- You must be currently eligible to work in Hungary

Join our collaborative team and help shape Microsoft-based digital transformation solutions for leading organizations across Europe.

About Your Application:

Please include only information in your CV that is directly relevant to the role. Our recruitment team will review all applications and contact candidates whose experience best matches the requirements. Our data protection policy is available on our site.

Az álláshirdető által megadott követelmények

- 5+ év munkatapasztalat: Data Engineering
- Munkavégzési engedély itt: Hungary

- ☒ Teljes munkaidős

Készségek

- ☒ SQL
- ☒ Data Engineering
- ☒ Continuous Integration and Continuous Delivery (CI/CD)
- ☒ Data Warehousing
- ☒ Amazon Redshift
- ☒ Data Modeling
- ☒ Amazon CloudWatch
- ☒ Data Build Tool (DBT)
- ☒ PySpark
- ☒ Apache Airflow

What You'll Bring

- 5+ years of software engineering experience.
- Experience developing production AI applications using LLM.
- Strong proficiency in Python.
- Experience integrating AI APIs such as OpenAI, Anthropic or Google Gemini.
- Experience with RAG architectures and modern AI frameworks.
- Strong understanding of software architecture and distributed systems.
- Ability to independently investigate and resolve complex production issues.
- Excellent communication and stakeholder management skills.
- Proactive mindset with strong ownership and accountability.

What's In It For You

- Remote first company in pursuit of sustainability
- A competitive salary + individual performance based bonuses every quarter
- 28 days paid annual leave
- Our core working hours are 10am-3pm in your local time zone with flexibility outside of this
- Referral bonuses & flash bonuses
- Top of the line equipment
- Annual company retreats to provide great internal networking opportunities

Interview Process

- Remote video screening with our Talent Acquisition Team
- Online home assignment
- Remote video interview with a Team Member (60

Job Summary

Senior Robotics Engineer will bring business value to our clients through the development, optimization, and implementation of robotics solution with a focus on the advanced computer vision parts of it. Senior Robotics Engineer will use the latest technologies and frameworks to create efficient and reliable robotic systems.

Key Responsibilities

- Integrate with Reality Capture solutions to read information from various PointCloud formats (e.g., xyz, .rcp, .e57, .PTS) and video streams and convert them into other formats as needed.
- Potentially implement integration with reality capture solutions
- Develop object detection algorithms on Point Clouds and video stream in realtime typically with Nvidia Jetson or in the cloud with GPU-accelerated local/cloud clusters.
- Develop other advanced computer vision algorithms and enterprise integrations working various corresponding recordings
- Contribute to robot control algorithms development to enhance robotic functionality.
- Work in, implement simulation scenarios to test and validate above algorithms.
- Integrate simulation environments with ROS/ROS2 for seamless operation.
- Conduct performance tests and troubleshoot software issues.
- Collaborate with hardware engineers to ensure software-hardware compatibility.

Skill Requirements

- Solid knowledge of Python programming, and with leading computer vision solutions, openness to learn and work with LVMs (Large Vision Models).
- Experience with computer vision and Point Cloud processing.
- Optionally experience with simulation frameworks and ROS/ROS2. Professional level of English (written and oral).
- Excellent problem-solving, analytical, and communication skills.
- Intelligent, communicative team-player personality, interested in and willing to learn new skills and technologies.
- Team mentoring would be an added advantage.

Az álláshirdető által megadott követelmények

Qualifications

Required Skills & Experience

Essential

- 5+ years of experience in data architecture, data engineering, or a closely related role
- Strong proficiency in data modelling techniques: relational, dimensional (Kimball/Inmon), and Data Vault
- Hands-on experience with data integration tools and frameworks (e.g. Apache Kafka, dbt, Spark, Talend, or similar)
- Solid understanding of cloud data platforms (AWS, GCP, or Azure) and modern data stack components
- Advanced SQL skills and familiarity with Python or Scala for data engineering tasks
- Proven ability to translate business requirements into scalable data architecture solutions

Preferred

- Prior exposure to event-driven architectures or real-time data platforms
- Experience working in agile, value-stream-aligned product organisations
- Familiarity with data mesh principles and decentralised data ownership models
- Knowledge of data governance frameworks and metadata management tools (e.g. Collibra, Alation, DataHub)
- Experience with analytical tools such as Looker, Tableau, Power BI, or Metabase

What We're Looking For

The ideal candidate brings both technical depth and cross-functional communication skills. You are comfortable moving between high-level architectural design and hands-on implementation. You thrive in collaborative, fast-paced environments and enjoy working across teams to solve complex data challenges. You bring a product mindset to data — treating data as an asset that must be reliable, discoverable, and useful.

Additional Information

* Please be informed that our remote working possibility is only available within Hungary due to European taxation regulation.

Mentés

Must have skills

- Hands-on experience building solutions with Microsoft Copilot Studio, Power Platform (Power Automate, Power Apps), or similar low-code/no-code AI tooling methods. You should be able to take a business problem and turn it into a working agent or automation
- Demonstrable experience with multiple AI/GenAI tools and platforms – you are not locked into one ecosystem and can evaluate, learn, and deploy new tools as they emerge
- Strong business analysis capability – you can map complex business processes, identify where AI adds genuine value, and distinguish between problems that need AI and problems that need better processes.
- Excellent communication and stakeholder management across all levels – equally comfortable presenting ROI cases to senior leaders as you are coaching a team member through their first prompt
- Practical experience with change management or technology adoption – you understand that building a solution is half the job; getting people to use it is the other half
- Working knowledge of prompt engineering and GenAI application design – not just using AI tools, but designing multi-step workflows, agent architecture, and conversational experiences
- Self-directed and comfortable operating with ambiguity – you will be embedded in business teams without a detailed playbook, expected to support identification of what matters most and act on it
- Strong documentation instincts – you create clear, reusable guides, solution templates, and training materials that outlast your direct involvement

Nice to have skills

- Direct experience in financial services or asset management – understanding of investment processes, client service, middle and back-office workflows is very beneficial to the applicant
- Experience designing practical technology solutions in environments where security, data sensitivity, and responsible delivery matter
- Deep familiarity with the Microsoft 365 ecosystem – SharePoint, Teams, Dataverse, Azure AI services – and how they interconnect
- Background in engineering, consulting, internal advisory, or embedded specialist roles where you had to earn credibility and deliver results without direct authority
- Experience with ROI measurement and value tracking for technology implementations – building the case, defining the metrics, and following through on outcomes
- Understanding of data governance, responsible AI principles, and the emerging regulatory landscape for AI
- Experience training, mentoring, or coaching others in technology adoption – particularly non-technical users
- Product management sensibility – ability to think in terms of MVPs, iteration, user feedback, and feature prioritization
- Microsoft certifications in AI, Power Platform, or Copilot Studio

Supervisory responsibilities

- No – but you will be expected to support Fighter Pilots within your assigned business units as part of the AI Academy approach

Potential for growth

- Mentoring
- Leadership development programs
- Regular training
- Career development services
- Continuing education courses
- Microsoft AI and Power Platform certification pathways
- Exposure to a firm-wide AI transformation programme with direct executive visibility
- Opportunity to shape a new function – the AI Business Partner model is being established for the first time at Janus Henderson, with scope to define how the role scales across the organisation

You will be expected to understand the regulatory obligations of the firm, and abide by the regulated entity requirements and JHI policies applicable for your role.

At Janus Henderson Investors we're committed to an inclusive and supportive environment. We believe diversity improves results and we welcome applications from candidates from all backgrounds. Don't worry if you don't think you tick every box, we still want to hear from you! We understand everyone has different commitments and while we can't accommodate every flexible working request, we're happy to be asked about work flexibility and

All About You

A track record of delivering complex systems through personal depth and attention to detail, with the ability to design an architecture, write and review code, and hold high standards for quality at every level of the stack.

Deep experience designing and operating large-scale data processing pipelines, with the ability to reason about tradeoffs in pipeline architecture, cost, performance, and reliability.

Experienced with distributed systems, cloud infrastructure (AWS), security, and reliability engineering.

Extensive hands-on experience with Spark and Databricks; proficiency in Scala or Java, with Python experience a plus.

Able to assess technical proposals with data: prototyping to validate feasibility and defining measurable success criteria to support clear recommendations.

Familiar with machine learning workflows, including feature engineering, model training, and the data infrastructure requirements that support them.

Able to review requirements critically and collaboratively, asking whether something is truly needed, proposing alternatives, and surfacing concerns early, while keeping the team moving forward.

Clear communicator who can explain technical decisions to engineers, product owners, and business stakeholders at the right level of detail.

Committed to mentoring the engineers you work with, patient in explaining complex topics and generous with your time and knowledge.

Aware of how the team's work fits into the broader organization, proactive in communicating across teams, and alert to opportunities to share platforms and avoid duplicated effort.

Requirements

Core Software Engineering

- 4+ years of professional experience in Modern C++ (C++17/20)
- Strong knowledge of memory management, multithreading, profiling and performance optimization
- Experience debugging low-level issues (memory leaks, fragmentation, OOM, concurrency)
- Experience working with Linux development environments

AI Inference / ML Systems

- Experience integrating machine learning models into production applications
- Experience deploying and optimizing AI inference pipelines
- Hands-on experience with AI inference frameworks such as: llama.cpp (strong plus), ggml (strong plus), ONNX Runtime, TensorRT / TensorRT-LLM, OpenVINO, MLC LLM, ExecuTorch, TVM
- Experience profiling inference performance and optimizing memory usage and latency

Deep Learning Knowledge

Strong understanding of modern AI model architectures, including:

- Transformer architecture
- Large Language Models (LLMs)
- Diffusion Models
- Tokenization
- Attention mechanisms
- KV Cache
- Quantization techniques
- Model conversion and deployment

Practical AI Experience

- Experience working with one or more of the following: LLM deployment, Computer Vision models, OCR models, Multimodal models, Speech models, Image generation models
- Experience evaluating new models and integrating them into existing products is highly desirable

Nice to Have

- CUDA
- Vulkan Compute
- Metal
- OpenCL
- Typescript
- Python
- Experience contributing to open-source AI infrastructure projects

Benefits

Why people stay

First, the foundation:

- Remote flexibility: Work where and how you work best - we trust you to deliver
- Fair compensation: Competitive salary + benefits that matter (medical, learning)

**The knowledge I own:**

- Practical experience with M365 tools (Excel, Outlook, SharePoint)
- Advanced knowledge of Tableau Desktop and Tableau Prep Builder
- Advanced knowledge of Power BI and Microsoft Fabric
- Experience in datalake technologies: EDLAP, DataBricks, Satalite
- Comfortable with writing, interpreting, and reading MSSQL queries
- Ability to create and maintain basic table structures
- Basic understanding of data types and their appropriate use
- Background of data analytics, data engineering
- Experience with agile delivery methodology
- Good command of written and spoken English
- Experience with tools such as OpenText ALM, Tricentis qTest, Confluence, Jira, SharePoint, ServiceNow
- Initial experience in project, release and/or test management, ITIL processes

The offer that would convince me:

- In our international team you can work with our colleagues from all over the world
- We develop our own product and focus on high-quality, stable solutions
- We are committed to build up teams where trust and honest communication are essentials to our daily work
- Regular salary increase, we follow the inflation and reward loyalty
- Continuous learning opportunities through our own e-learning platform and internal teams
- Flexible working hours with home office possibility

YOUR PROFILE

- AWS expertise and architectural mindset: You have several years of hands-on experience with AWS, understand the capabilities and limitations of core AWS services (e.g., Lambda, ECS/EKS, EventBridge, SQS/SNS, DynamoDB, OpenSearch, S3, IAM, and VPC), and design secure, scalable cloud architectures.
- Amazon Bedrock and LLM agents: You have practical experience with Amazon Bedrock—ideally including AgentCore (Agents, Action Groups, Memory, Knowledge Bases, and Guardrails)—and understand what it takes to build and operate production-grade LLM and AI agent solutions. Experience with frameworks such as LangChain, LlamaIndex, AutoGen, or CrewAI is a plus.
- Contact center and Amazon Connect experience: You have hands-on experience designing contact flows, working with Amazon Lex, real-time analytics, and integrating external systems into Amazon Connect environments. You understand the requirements of modern customer service operations.
- DevOps, Infrastructure as Code, and containerization: You have project experience with Infrastructure as Code (Terraform or CDK), CI/CD pipelines, and container platforms (ECS or EKS). You integrate testing, observability, and security guardrails into your delivery processes. Familiarity with compliance standards (e.g., GDPR, BSI, ISO 27001) and AWS certifications is an advantage.
- Consulting and communication skills: You can explain complex technical concepts to both technical and non-technical audiences and communicate confidently in workshops, architecture reviews, and executive presentations.
- AI expertise: You possess in-depth expertise in artificial intelligence, actively promote its responsible use within your area of responsibility, and act as an AI enabler for both customers and colleagues at adesso.
- Education & Language skills: University degree in IT field & Fluent, confident English skills (spoken and written).

Unser Versprechen: Du wirst dich bei uns wohlfühlen! Kollegial, familiär und auf Augenhöhe – wir leben Austausch, Teamgeist und einen respektvollen Umgang miteinander. Diversität und verschiedene Blickwinkel werden bei uns genauso geschätzt wie du als Mensch. Das und viel mehr steht für unser ganz besonderes Wir-Gefühl. Für das es sogar ein Wort gibt: adesso.

Unsere Kultur und das Zusammenarbeiten sind geprägt von gegenseitiger Wertschätzung, Anerkennung und Unterstützung. Das verbindet uns hierarchieübergreifend – auch im Home-Office. So belegen wir zum wiederholten Mal den 1. Platz beim Wettbewerb „Deutschlands Beste Arbeitgeber in der ITK“!. Unser umfangreiches Trainingsangebot und ein transparentes Laufbahnstufenmodell für alle sorgen dafür, dass deine Entwicklung bei uns nicht stillsteht. Denn gemeinsam zu wachsen und Chancengeber zu sein, das ist programmiert in unserer DNA.
