

You are looking for us, if you have

- Bachelor's degree in Computer Science, Information Technology, or a related field.
- 3+ years of professional engineering experience, including recent hands-on work on AI projects. We care more about what you have actually built with GenAI than about how long your CV says "AI" on it. Software engineering, data engineering and data science backgrounds are all a strong starting point.
- Strong proficiency in Python and hands-on experience with the GenAI ecosystem (e.g. LangChain, LlamaIndex, agent frameworks, LLM provider SDKs, Pydantic).
- Solid understanding of LLM application concepts: RAG, embeddings, vector databases, tool calling, agent patterns, prompt engineering and evaluation.
- Proven experience designing, consuming and integrating APIs, and connecting AI services to existing systems.
- Working knowledge of AWS, including hands-on use of at least one of its AI/ML or serverless services. Strong cloud-agnostic experience across multiple providers is a plus, but some practical AWS exposure is expected.
- Good command of SQL and a working understanding of core data engineering concepts (ETL, pipelines, data modelling).
- Excellent problem-solving and communication skills, and the ability to work independently and collaboratively in a fast-paced environment.

Nice to have

- Real project experience with Amazon Bedrock AgentCore and the Strands Agents SDK. If you have shipped something with these, that is an amazing plus.
- Classical machine learning and pre-LLM NLP experience, and the related toolkit (scikit-learn, pyspark, matplotlib).
- Computer vision, recommendation systems, anomaly detection experience.
- Experience with ETL processes and tools (e.g. Airflow, AWS Glue).

What we offer

We believe that exceptional people deserve exceptional recognition:

- A company culture based on autonomy and

Required Skills and Experience:

- Degree in quantitative fields such as engineering, mathematics, statistics, or other related areas.
- Familiarity with the EU AI Act from a technical perspective.
- At least 3 years of hands-on experience in developing, validating, and reviewing AI models. Based on previous experience, candidates will be considered for either Senior Associate or Manager positions.
- Prior experience preferably from a consulting or technology company.
- Strong understanding of the landscape of Artificial Intelligence and model risk management, including local and international regulations.
- Proven leadership capabilities in managing teams and projects with a focus on model governance.
- Regulation and Compliance: Conduct comprehensive assessments and audits of AI/ML systems, evaluating their compliance with relevant regulations and industry standards, and offering recommendations for improvement.
- Knowledge Sharing: Serve as a subject matter expert in AI/ML assurance, staying up-to-date with the latest developments, best practices, and trends, and sharing your knowledge with internal and external stakeholders.
- Ability to simplify complex model concepts and effectively communicate insights.
- Strong project execution skills to deliver across competing priorities.
- Relationship management skills to collaborate with stakeholders.
- Strong people skills, team-orientation, and a professional attitude.
- Fluency in English, German is a plus.

**You are looking for us, if you have:**

- A bachelor's degree in Computer Science, Information Technology, or a related field
- Multiple years of experience, including recent hands-on work on AI projects. Software engineering, data engineering and data science backgrounds are all a strong starting point.
- Experience with some of the following technologies: SageMaker, Bedrock, Glue, MWAA, EMR, RDS, Aurora, S3, OpenSearch, Elasticsearch.
- Strong proficiency in Python and hands-on experience with the GenAI ecosystem (e.g. LangChain, LlamaIndex, agent frameworks, LLM provider SDKs, Pydantic).
- Good command of SQL and a working understanding of core data engineering concepts (ETL, pipelines, data modelling).
- Proven experience designing, consuming and integrating APIs, and connecting AI services to existing systems.
- Solid understanding of LLM application concepts: RAG, embeddings, vector databases, tool calling, agent patterns, prompt engineering and evaluation.
- Working knowledge of AWS, including hands-on use of at least one of its AI/ML or serverless services. Strong cloud-agnostic experience across multiple providers is a plus, but some practical AWS exposure is expected.
- Excellent problem-solving and communication skills.
- Excellent problem-solving and communication skills, and the ability to work independently and collaboratively in a fast-paced environment.
- AWS Professional/Specialty Certification is a plus

What we offer

We believe that exceptional people deserve

[Jelentkezés](#)[Mentés](#)

What You Bring

- 5+ years in data analytics or BI in an enterprise environment
- Strong, hands-on experience with Databricks (early-stage or evolving environments)
- Proficiency in Python and SQL
- Deep expertise in Power BI
- Experience partnering with IT on pipeline design
- Hands-on experience with AI/ML or AI-powered analytics solutions
- Working knowledge of SAP data environments

**HR Data Analyst - Culture, Engagement ...**

Nexperia • Budapest, Budapest, Hungary (On-sit...

**This is you**

You are a data-driven HR professional with strong analytical skills and the ability to translate insights into business impact:

- Bachelor's degree in Data Analytics, Data Science, HR, Psychology, Business, or a related field
- 3+ years of experience in data analytics, people analytics, or workforce analytics
- Experience with engagement, culture, or DE&I analytics is strongly preferred
- Advanced analytical capability, including experience with large datasets and multiple data sources
- Proficiency in BI tools (e.g. Power BI, Tableau) and advanced Excel
- Experience working with HR systems (HRIS) and survey platforms
- Strong storytelling mindset with the ability to translate complex findings into clear recommendations
- High level of integrity and sensitivity when working with confidential and DE&I-related data
- Collaborative and stakeholder-oriented approach
- Advanced English proficiency with strong communication and presentation skills, enabling clear storytelling and translation of complex data into actionable insights for senior stakeholders
- Experience in multinational or matrix organizations is an advantage
- Affinity for or experience with AI-driven analytics is a plus

This Is What We Offer

At Nexperia, you will be part of a global HR organization that values data-driven decision-making and continuous improvement:

- A role within a global HR Shared Service Center with exposure to international data and stakeholders

[Jelentkezés](#)[Mentés](#)

We need you to have:

- Proven experience in people management, team leadership, or mentoring within the data, analytics, or tech space (you know how to balance group dynamics and build a strong team spirit without ever resorting to corporate trust falls)
- A rock-solid background in digital analytics, tracking, CRO, or data strategy - meaning you can talk effortlessly about ETL, data models, and analytics tech stacks without breaking a sweat
- Analytical, logical, and structured thinking - you don't just look at dashboards; you hunt for the actual stories, insights, and "whys" behind the numbers (think of yourself as a detective, just with more spreadsheets and fewer trench coats)
- Excellent communication and interpersonal skills to keep both your team, other internal departments, and our clients happy and aligned
- Excellent communication skills in Hungarian and English, as you'll be switching between them in your day-to-day tasks

We would be extra happy if:

- You have hands-on experience with modern cloud data platforms (like BigQuery, Snowflake, AWS) or advanced dashboarding systems
- You've already spent some time working in an agency or consulting environment
- You enjoy public speaking, knowledge sharing, or active community building within the data industry (and you don't get stage fright if a room happens to have more people than an Excel sheet row limit)

Benefits

**Egyszerű
jelentkezés**

Mentés

**Our requirements:**

- Bachelor's or Master's degree in Artificial Intelligence, Computer Science, Data Science, Business Informatics, Finance Analytics or a related technical discipline
- Experience working on AI, automation, analytics or digital transformation initiatives
- Good understanding of financial and controlling processes, including reporting, planning, budgeting and forecasting
- Experience working with ERP systems and complex business data
- Fluent English communication skills
- Ability to understand business requirements and translate them into practical solutions in an international environment
- Practical, implementation-oriented mindset with a focus on delivering tangible results and business impact
- Ability to work independently, identify quick wins and drive initiatives from idea to execution
- Willingness to travel to our European locations (typically once per month) to support collaboration, understand local processes and drive implementation initiatives

Would be advantageous:

- Experience working within Finance, Controlling, FP&A or Shared Service environments
- Experience with Power Platform (Power Automate, Power Apps, Power BI)
- Understanding of product costing, margin analysis or manufacturing finance processes
- Participation in AI competitions, hackathons, research projects or open-source initiatives

What we offer:

- Opportunity to play a key role in the transformation of our European Controlling organization
- A unique position at the intersection of Finance, AI and process automation
- The chance to develop practical solutions that improve how financial reporting, planning and analysis are performed across the business
- Real ownership and visibility of your work, with the opportunity to influence tools, processes and

[Jelentkezés](#)[Mentés](#)

You Have

- MSc or PhD in a quantitative discipline
- Solid mathematical foundations, especially probability theory and statistics
- Strong analytical and problem solving skills
- Strong programming and software design skills (experience with C++ or Scala is a plus)
- Excellent interpersonal and communication skills
- Self-motivated personality with high standards for quality of work, and attention to detail
- Experience working in a role supporting the front office is a plus

What You Can Expect From Morgan Stanley

At Morgan Stanley, we raise, manage and allocate capital for our clients – helping them reach their goals. We do it in a way that's differentiated – and we've done that for 90 years. Our values - putting clients first, doing the right thing, leading with exceptional ideas, committing to diversity and inclusion, and giving back - aren't just beliefs, they guide the decisions we make every day to do what's

[Jelentkezés](#)[Mentés](#)

**Required professional background and skills:**

- University or college **degree**, preferably in **Finance or Economics**; we also welcome **other highly quantitative fields** (such as business informatics, mathematics, statistics or similar)
- Have at least **2–4 years relevant experience**, preferably gained at other **advisory firms**
- Fluency in **Hungarian and English**
- Excellent knowledge in **Excel**, solid knowledge of financial principles
- Hands-on experience and sound knowledge of at least **1 analytics tool** such as **PowerBI, Tableau, SQL, Python, Alteryx**
- Practical experience with **AI-enabled analytics tools and approaches** (e.g., automation, ML-assisted analysis, or use of AI features in analytics platforms)
- Outstanding communication and interpersonal skills, team player attitude
- Strong analytical and problem-solving skills, with precision and excellent numerical/logical reasoning
- Ability to understand and solve complex tasks
- Ability to identify patterns and trends in data sets
- High standards in preparing and delivering client materials (reports, presentations, visualizations)
- Self-motivated, confident personality with the ability to take initiative and work independently

You will definitely impress us, if additionally you:

- have CFA or ACCA certification (or ongoing studies)
- have financial modelling experience
- know Data Analytics & BI tools, Tableau
- have experience with R, SAS or SQL
- speak German as well

Your future role**As a trusted consultant, you will:**

- Build **complex financial analysis** utilizing Microsoft Excel, Python, Alteryx, KNIME, Power BI & Tableau
- Take part in significant **international transaction projects**
- **Collect, research, and analyze data related to the client's business operations**
- **Analyze data structure and data quality to ensure robust analyses**
- **Research industries, specific companies, and market data**
- **Analyze companies from a financial, operational, and industry perspective**

Az állás részletei

EWOR is launching cutting-edge new initiatives, and we are looking for exceptional operators and builders to join our new department.

We are backed and led by serial entrepreneurs, including Paul Müller (founder of Adjust, €1.2B exit) and Petter Made (founder of SumUp, €8B), who have built high-impact technology and category-defining ventures from the ground up.

What We Offer

- Maximum ownership: Complete autonomy to architect systems, drive strategy, and build from 0 to 1 without corporate red tape.
- High-growth environment: Complete focus on achieving strong market validation and scalable traction as fast as possible. No PowerPoint presentations, no 7 layers of approval. Good ideas and fast execution are what matter.
- Elite team: Report directly to the department founder and collaborate with a world-class team of engineers, researchers, and commercial leaders.
- Competitive compensation & upside: Attractive compensation with equity upside.

Tasks

- You will lead and execute core 0-to-1 initiatives in cutting-edge domains such as AI Research Lab.
- You will translate high-level strategic vision into concrete execution roadmaps, driving rapid implementation from prototype to production.
- You will architect scalable solutions and drive critical milestones to position the new department for rapid growth and potentially a spin-off to attract institutional backing.

Requirements

- You are based in Europe or the Americas (or open to relocate/remote arrangements).
- You have a high-agency builder mindset, with proven domain expertise and the drive to take extreme end-to-end ownership.
- You have excellent verbal and written communication skills in English.

Join us to build cutting-edge technology and category-defining initiatives from the ground up!

Jelentkezés

Mentés

Qualification requirements:

- A BSc, MSc or Ph.D. in engineering, computer science or a related field.
- At least 5 years of professional experience developing and deploying deep learning and computer vision models.
- Strong grasp of the end-to-end ML workflow: preparing data, training models and evaluating results.
- Solid grounding in modern neural network architectures, including convolutional networks and attention mechanisms.
- Working understanding of large language models (LLMs), vision-language models (VLMs) and adaptation techniques.
- Strong communication skills, able to present work clearly to senior and non-technical stakeholders.
- Experience working in agile environments, with strong analytical and problem-solving skills.
- Experience with deepfake detection, face anti-spoofing / liveness, biometric security or media forensics is a strong plus.
- Experience leading or mentoring machine learning engineers is a strong plus.

Technical requirements:

- Expert-level Python, with proven experience building deep learning models in production. Familiarity with C++ is a plus.
- Professional experience with modern deep learning frameworks such as PyTorch, TensorFlow or JAX.
- Hands-on experience deploying and optimising models on AWS (e.g. EC2, Athena) and related MLOps services. (MLFlow etc)
- Experience optimising neural networks for deployment, including model compression, quantisation and runtime optimisation.
- Fluent in Linux/Unix and comfortable with Docker and containerised workflows.
- Day-to-day use of AI-assisted coding tools such as Claude Code.
- Knowledge of GPU-based / distributed training and mobile deployment is a strong plus.
- Experience with AWS SageMaker is a plus.

data science

Why you belong at 4flow

To be successful in this position, we believe you should possess the following attributes:

- A Master's degree in a quantitative field such as (Business) Mathematics, (Business) Computer Science, Industrial Engineering, or Statistics.
- Strong programming skills in Python and experience with data analysis and visualization libraries (e.g., Pandas, NumPy, scikit-learn, Matplotlib, Seaborn).
- Solid knowledge of analytical databases, data management and data pipeline deployment with tools like dbt and Airflow.
- You are a fast learner with excellent communication skills and a structured, detail-oriented working style.
- You enjoy working with a team and want to contribute to an agile and supportive work environment.

Why 4flow?

Procurement Data Analyst
Bio-Rad Laboratories • Budapest, Budapest, Hu...

How You'll Make an Impact

- Perform data analyses using analytical models and mathematical analysis.
- Use data analysis and modeling to create new reports (including Power BI), troubleshoot issues, and modify existing reports.
- Function as a database system administrator by auditing functionality, assigning and training new users, troubleshooting issues, training other database users, and testing new system functionality.
- Analyze existing data records, summarize data quality findings, and recommend solutions for compliance, cost-saving, and standardization opportunities.
- Partner with team members across business units and functions to support new and ongoing business reporting, analytical, and training needs.
- Recommend scalable practices that enhance business measurements through statistical analysis and data-driven conclusions.
- Act as a liaison between end users, IT, and other cross-functional teams during the analysis, design, configuration, testing, and maintenance of systems to ensure optimal operational performance.
- Research and prepare statistical reports, consolidating information into clear and understandable formats to support management decision-making.
- Coordinate with internal customers and external vendors on primary research projects.
- Develop reports that analyze spending, opportunities for consolidation, and standardization opportunities.
- Participate in large projects focused on improving business operations and processes.
- Partner with senior analysts on initiatives to create new reports, metrics, and dashboards based on business needs.
- Develop presentations and effectively communicate results to business partners.
- Collaborate with internal operational business partners and stakeholders to identify and define opportunities for improving operations.
- Define, develop, and implement scorecard metrics and measurement tools.

What You'll Bring

- Fluent English language skills (French and/or German is a plus).
- Bachelor's degree or equivalent in Business Administration, Information Systems, or a related discipline.
- 3+ years of experience managing databases, providing timely user support, and writing reports, or an equivalent combination of education and experience.
- Advanced knowledge of the business area served, including Operations and Systems.
- Advanced quantitative skills with proficiency in:
 - Data analysis (SAP, MS Access)
 - Data modeling (MS Excel)
 - Presentations (MS PowerPoint)
- Strong knowledge of data visualization tools such as Power BI and GEP.
- Experience with ETL tools including SQL, VBA, Snowflake, and Alteryx.
- Advanced experience with e-bidding tools such as Market Dojo.
- Strong interpersonal, organizational, analytical, problem-solving, and time management skills.
- Ability to take complex information and communicate it clearly and concisely to various levels of the organization.
- Ability to create and deliver presentations to both technical and non-technical audiences.
- Ability to explain and teach new data models and functions.
- Ability to perform advanced statistical reporting and create logical, detailed, and analytical reports.

Who We Are: For 70 years, Bio-Rad has focused on advancing the discovery process and transforming the fields of science and healthcare. As one of the top five life science companies, we are a global leader in developing, manufacturing, and marketing a broad range of high-quality research and clinical diagnostic products. We help people everywhere live longer, healthier lives. Recently voted a Best

Mentés

What We Are Looking For

- Strong practical experience in ML engineering and MLOps, including deploying, operating, monitoring, retraining and versioning ML models in production.
- Strong Python skills, with practical experience in PySpark or Apache Spark.
- Experience with Azure Databricks, MLflow and preferably Azure Machine Learning.
- Good understanding of lakehouse architecture, Delta Lake, layered data platforms, data modelling, data transformation and designing data structures for analytical and ML use cases.
- Basic knowledge of data quality, metadata, lineage, access-control concepts, governance and integration of ML workloads with enterprise data platforms.
- Knowledge of CI/CD, Git, Azure DevOps and infrastructure-as-code tools such as Terraform or Bicep.
- Experience with cloud resource management, monitoring and cost optimisation.
- Good understanding of end-to-end Azure Data/AI solution architecture, including security, identity, networking and scalable deployment patterns.
- Ability to evaluate architecture alternatives considering performance, security, maintainability and cloud cost.
- Experience collaborating with and technically overseeing external vendors, including architecture and solution reviews.
- Strong communication and interpersonal skills, including listening to clients, working in cross-functional teams, and clear verbal and written communication.
- Fluent English and Hungarian.
- Great numerical and analytical skills.
- Leadership and coaching mindset, team spirit, and ability to foster inclusive, supportive team dynamics.
- Readiness to work in the niche field of higher education, where service and experience are paramount.
- Service-oriented and autonomous approach: responsiveness to client requests, flexibility, versatility, daily proactivity and thirst for learning.
- Commitment to standards and consistency: insists on consistent engineering practices and documentation without creating unnecessary bureaucracy.

Nice to have

- Fluent French would be a plus
- Familiarity with higher education systems and processes is a plus.

Compensation & Perks

An attractive package designed for top talent:

Key Skills And Experience

- Experience (3+ years) in a data analysis, business intelligence, or people analytics role.
- Strong proficiency in Power BI, including advanced capabilities with DAX for complex calculations, data modeling, and performance optimization.
- Excellent analytical, problem-solving, and critical thinking skills.
- Strong communication and presentation skills, with the ability to translate complex data into understandable insights for non-technical stakeholders.
- Experience with Power Automate for designing and implementing automated workflows and integrations.
- Expertise in SQL (for data extraction, manipulation, and querying large datasets from various sources) and or in Power Apps is a plus but not a must!

About Us

Advancing connectivity to secure a brighter world.

Nokia is a global leader in connectivity for the AI

About You

Required Education, Experience & Skills

- Degree in Information Systems, Data Engineering, Computer Science, Data Management, or a related field
- 3–5 years of experience in data engineering, data quality, data governance, or a related analytical/technical role
- Demonstrated hands-on experience building data pipelines, validation frameworks, or automation scripts in Python
- Proven track record of conducting data investigations and delivering structured, actionable findings
- Experience working in a global, matrixed organization with cross-functional stakeholders
- Strong SQL skills for data profiling, investigation, and validation across large-scale HR datasets
- Experience with big data technologies such as Snowflake
- Experience building and maintaining ELT/ETL pipelines for data quality monitoring and remediation
- Familiarity with data remediation processes, including mass data loads and EIB (Enterprise Interface Builder) or equivalent
- Understanding of HR data domains: employee records, organizational structures, skills profiles, compensation, payroll inputs, and workforce reporting
- Experience with data quality platforms or monitoring tools (e.g., Informatica CDGC, Collibra, Ataccama, or similar)

Preferred Qualifications

- Experience in the pharmaceutical, biotech, or life sciences industry
- Experience working with Workday HCM or comparable enterprise HR platforms is a strong plus — Workday certification or formal training valued but not required as the primary technical requirement
- Familiarity with Workday Skills Cloud, Career Hub and their underlying data structures
- Exposure to MLOps or AI/ML data pipeline engineering
- Certification in data governance, data quality management, or HR analytics
- Knowledge of GDPR, data privacy regulations, and their implications for HR data management

Why choose us?

- An international work environment, in which you can develop your talent and realize ideas and innovations within a competent team
- Bring the miracles of science to life alongside a supportive, future-focused team
- An environment based on last technologies and

minimal travel may be required.

Qualification Requirements

- Graduate degree in biostatistics or related discipline.
- Extensive experience in clinical trials or an equivalent combination of education and experience, demonstrated by the ability to lead multiple projects and programs of studies.
- Proficiency in R programming.
- Ability to apply extensive knowledge of statistical design, analysis, relevant regulatory guidelines, and programming techniques utilized in clinical research and to effectively communicate statistical concepts.
- Experience across all statistical tasks required to support clinical trials during the lifecycle of the project, from protocol to CSR.
- Experience with regulatory submissions preferred.
- Excellent written and verbal communication skills.
- Ability to read, write, speak, and understand English.

Árazó aktuárius

Generali Biztosító • Budapest, Hungary (Hybrid)

- termékkontrolling elemzések készítése.

Kit keresünk?

Egy kiemelkedő elemző- és problémamegoldó képességgel rendelkező, ugyanakkor proaktív, lelkes és elkötelezett, önálló munkavégzésre képes kollégára van szükségünk, aki:

- matematikusi, aktuáriusi végzettséggel rendelkezik,
- 3-5 év releváns szakmai tapasztalatot szerzett kockázati élet-, baleset- és egészségbiztosítási termékek árazási területén,
- felhasználói szintű MS Office és adatbázis-kezelési ismeretekkel bír,
- precíz, pontos munkavégzés jellemzi,
- erős statisztikai ismeretei vannak,
- középfokú angol nyelvtudással rendelkezik (szóban, írásban),
- tud és szeret is csapatban dolgozni.

Pozíció betöltése során előnyt jelent:

- gépjármű-, lakossági vagyonszociális árazási tapasztalat,
- adatbázis-kezelési ismeretek (SQL, Access),
- kockázatmodellezési program ismerete (Emblem),
- Python, R, egyéb hasonló programok felhasználói szintű ismerete.

Jelentkezés 

Mentés

The knowledge I own:

- 3+ years of professional experience in data engineering, analytics engineering, BI engineering or a similar data-focused role
- Strong SQL skills and experience writing complex queries involving joins, aggregations and performance optimization
- Experience working with relational databases and large datasets
- Solid understanding of data modeling concepts and relational data structures
- Experience building data pipelines, ETL processes or analytical data models
- Ability to translate business questions into data solutions and analytical models
- Experience collaborating with business stakeholders and participating in requirement workshops
- Practical experience using Git for version control and collaborative development
- Experience working in an agile development environment
- Strong analytical thinking and the ability to understand relationships between complex datasets
- Growth-oriented mindset with willingness to learn new platforms and technologies
- Comfortable working in an environment that includes operational responsibility; on-call participation may be required later

Nice-to-have:

- Experience with process mining platforms (e.g., Celonis, Signavio, UIPath)
- Experience working with ERP systems such as SAP or other enterprise systems
- Experience with Python for data processing or machine learning
- Experience designing analytical dashboards or BI solutions
- Familiarity with large-scale enterprise data environments and real-time analytics
- Experience working with event-based or process-oriented data models
- Understanding of supply chain, finance or purchasing business processes

AI/ML affinity:

- Experience working with machine learning or AI-driven analytics use cases
- Interest in integrating AI capabilities into operational analytics and process monitoring
- Openness to using AI-assisted development tools to improve productivity and code quality

The offer that would convince me:

- Opportunity to work on a large-scale process intelligence platform used by thousands of users across the organization
- Participation in building advanced analytics and automation solutions that directly improve business operations
- Small, highly technical teams with strong ownership of solutions and architecture
- Exposure to modern data engineering practices and enterprise-scale analytics environments
- Opportunities to work with cutting-edge technologies such as process mining, real-time analytics and AI-driven insights
- Strong support for professional growth through trainings, conferences and internal knowledge sharing
- Open, collaborative working culture with close interaction between engineering and business teams
- International collaboration with teams across multiple business domains
- Flexible working hours with home office possibility

Process Mining Developer (mid-level),

Budapest, Hungary

**Toborzással kapcsolatos betekintés
zárolásának feloldása itt: ALDI
International IT Services (Hungary)**

▲ 52% alkalmazotti létszám növekedése

You bring:

Technical Credibility (The "Player"): You stay close enough to the work to have a grounded opinion. You read the code, inspect evaluation pipelines, and can immediately tell the difference between a statistical result that will hold up in production and one that just happened to look good on a single test window.

Leadership & Rigor (The "Coach"): You hold a high bar for evidence without becoming a bottleneck to experimentation. You mentor engineers to own their code quality, and you translate complex ML performance metrics into clear business outcomes for Risk leadership.

Executive Judgment: You know how to balance research bets against quarterly delivery, disagree and commit when decisions are made, and build an environment where well-documented negative experimental results are celebrated as real progress.

Responsibilities:

Lead and grow the team

- Guide career development, mentor the team, manage conflicts, and nurture a positive, collaborative environment across a geographically distributed organization.
- Engage in regular 1:1s, give constant feedback, and create a safe environment for open discussion – including the discussions that follow an experiment that didn't work.
- Encourage a culture of learning and improvement, provide technical guidance, and support team members in both technical and soft skills.
- Identify and address gaps in team capabilities and processes to enhance team efficiency and success.

Run a portfolio of experiments, not a delivery queue

- Partner with your tech leads, who own and drive the technical roadmap for their areas. Your job is not to be the sole source of ideas – it is to pressure-test them, sharpen them, make sure the strongest ones get resourced, and make sure the people generating them have the room and the support to do it.
- Make the calls the roadmap can't make for you: which hypotheses get compute and headcount, which get another iteration, and which get a clear, documented "no." A well-run negative result is a real outcome, and we treat it as one.
- Manage the trade-off between a committed improvement target you must hit this year and research bets that may not pay off for several quarters. You will re-cut that budget as evidence arrives, and you'll be able to explain the reasoning to both your team and your stakeholders.
- Bring rigor to how the team decides something worked. Offline results have to predict online behavior; a strong point estimate on a single evaluation window is a starting point, not a conclusion.
- Own delivery on a cadence. Independent experimental workstreams have to converge into a release candidate, get evaluated end to end, and ship – including the hard call to leave a workstream out of a release when it isn't carrying its weight.

Set direction from data, in partnership with Risk

- Work directly with our Risk partners as your primary stakeholders. Our commitments to them are explicit, measured, and written down; we deliver model performance, and they own thresholds, rules, and how decisions are applied to merchants.
- Operate with a high degree of autonomy. Our direction comes from measured performance against those commitments and from what our own experiments tell us, not from a product backlog handed to the team. You are expected to know what your team should be working on and to defend it, rather than wait to be told.
- Partner with our platform and infrastructure engineering teams on the feature systems, training pipelines, and experimentation tooling your team depends on – and be clear about where the laundry sits between what S&L should own and what belongs to Engineering.
- Represent your team's results to a broad audience: engineering leadership, Risk leaders, and the wider company.

Requirements:

- Roughly 5+ years in machine learning, data science, or ML-adjacent software engineering, including at least 3 years of people management – guiding career development, addressing conflicts, and building a healthy, high-performing team.
- Genuine depth in at least one of engineering and applied statistics, and real working competence in the other. We are not hiring a manager of analysts, and we are not hiring a manager of a pure software team. Our engineers train production models that decide serious traffic, and we expect their manager to be able to engage with that work at a technical level.
- Demonstrated ability to lead work under real uncertainty: setting a direction when the answer isn't known yet, changing course when evidence says so, and communicating both without eroding your team's confidence.
- Excellent written and verbal communication. Much of our decision-making happens in documents, and we expect managers to write well.
- Autonomy in recognizing priorities and evaluating the impact of outcomes, and comfort working without close supervision in a fast-moving environment.
- Commitment to quality. You take pride in work that excels in correctness, reproducibility, and reliability, and you set that standard for your team.
- Candidates must be based in Hungary

Benefits:

- Stock Options
- Annual Performance Bonus or Commissions
- Pension matched up to 3%
- Day one access to great health insurance scheme
- Paid team social events
- Mental wellbeing resources
- Dedicated learning budget through Learnerly

Machine Learning Engineering Manager, Budapest, Hungary

Senior Software Engineer - AI

4flow • Budapest, Budapest, Hungary (Hybrid)

Why you belong at 4flow

- You bring at least five years of experience in professional software development, ideally with a strong focus on integrating AI and machine learning into real-world applications.
- Building on a bachelor's degree in computer science, software engineering, or a related field, you feel confident working with Python or Java, and you're equally comfortable using SQL and handling large datasets.
- You have hands-on experience with established machine learning frameworks such as TensorFlow, PyTorch, scikit-learn or Hugging Face Transformers and you understand data engineering, ETL processes and core ML algorithms well enough to translate them into reliable, scalable solutions.
- Working with Docker, CI/CD pipelines, and cloud platforms like AWS, Azure, or GCP is already part of your daily toolkit.
- On top of your technical strengths, you bring strong analytical thinking, clear communication skills, a collaborative approach and a proactive, self-driven mindset. I
- If you've worked with frontend technologies like Angular, React or similar frameworks, that's an added bonus.

What we offer

Your Responsibilities

- Find creative uses of different database types and data pipelines to ensure patient data we collect and medical knowledge we produce stay consistent & interoperable.
- Develop and integrate parts of our clinical inference engine relying both on rule-based and statistical models.
- Design and extend clinical data models using domain ontologies (e.g., SNOMED-CT, FHIR, UMLS) to turn healthcare data into rich, queryable graph structures.
- Translate research insights into scalable, production-grade software efficiently in an agile and close-knit team.
- Work closely with medical experts to capture clinical workflows and validate ontology mappings.
- Shape the technical direction, schema design, and engineering best practices across the engineering team.

Your Profile

- MSc or PhD in computer science, mathematics, or related field.
- +4 years of proven industry experience in working with medical data or in data engineering (or appropriate academic research).
- Strong knowledge of graph databases, query languages, search algorithms and/or inference systems (e.g. Neo4j, Memgraph, Cypher, SQL, Datalog).
- Extensive experience in software development with Python and/or TypeScript – being comfortable with switching languages/frameworks.
- Resident in the EU with a valid work permit.

Nice to have

- Familiarity with concepts of statistics, formal logics and/or machine learning.
- Experience with EHRs and clinical data exchange formats (e.g. FHIR).
- Deep interest in the area of Knowledge Representation and Reasoning (KRR).
- Experience with independently managing cloud environments (ie. GCP) and CI/CD pipelines.

Your Benefits

- Join one of Europe's leading healthtech scale-ups and make a real impact in a purpose-driven environment.
- Take on exciting challenges while working in a dynamic space where creativity and fresh ideas are always encouraged.
- Benefit from a dedicated training budget and professional development time, because we believe in growing together and supporting your skill-building journey.
- Work where you are most productive – remotely from home or from one of our offices in Vienna, Budapest, and Berlin.
